Reproductive Pasts Reproductive Futures:

Reproductive Pasts, Reproductive Futures James R. Sorenson, Judith P. Swazey, Norman A. Scotch, 1987-09 *Sexual Education Around the World - Past, Present and Future Issues* Rogena Sterling, 2023-09-13 Sexual education is a worldwide concern that intersects with various attitudes values and cultural norms It is an area of life that has for many years been kept private but now there is recognition that there is a need to support people especially young people in modern societies The way sexual education is taught and applied within institutions shapes the way we understand and approach human sexuality Various societies have chosen various means to provide sexual education both at school and to the wider society There is still much more development and support needed however We can begin to identify strategies for overcoming challenges in sex education promoting healthier attitudes and empowering individuals to make informed decisions about their own bodies and relationships This book is organized into three sections The first section focuses on issues in sexual education such as sexual harassment sexuality and relationship education and advocacy by people with disabilities future challenges and sex differences in physical attractiveness The second section focuses on the means of sexual health education interventions including the use of technology The last section includes a chapter on sex education and the invisibility of intersex people in the curriculum Healthy Mothers, Healthy Babies Coalition Directory of Educational Materials ,1983 **Old Futures** Alexis Lothian, 2018-09-25 Finalist 2019 Locus Award for Nonfiction presented by the Locus Science Fiction Foundation Traverses the history of imagined futures from the 1890s to the 2010s interweaving speculative visions of gender race and sexuality from literature film and digital media Old Futures explores the social political and cultural forces feminists queer people and people of color invoke when they dream up alternative futures as a way to imagine transforming the present Lothian shows how queer possibilities emerge when we practice the art of speculation of imagining things otherwise than they are and creating stories from that impulse Queer theory offers creative ways to think about time breaking with straight and narrow paths toward the future laid out for the reproductive family the law abiding citizen and the believer in markets Yet so far it has rarely considered the possibility that instead of a queer present reshaping the ways we relate to past and future the futures imagined in the past can lead us to queer the present Narratives of possible futures provide frameworks through which we understand our present but the discourse of the future has never been a singular one Imagined futures have often been central to the creation and maintenance of imperial domination and technological modernity Old Futures offers a counterhistory of works that have sought with varying degrees of success to speculate otherwise Examining speculative texts from the 1890s to the 2010s from Samuel R Delany to Sense8 Lothian considers the ways in which early feminist utopias and dystopias Afrofuturist fiction and queer science fiction media have insisted that the future can and must deviate from dominant narratives of global annihilation or highly restrictive hopes for redemption Each chapter chronicles some of the means by which the production and destruction of futures both real and imagined takes place through eugenics

utopia empire fascism dystopia race capitalism femininity masculinity and many kinds of queerness reproduction and sex
 Gathering stories of and by populations who have been marked as futureless or left out by dominant imaginaries Lothian
 offers new insights into what we can learn from efforts to imaginatively redistribute the future **Past and Future Rapid
 Environmental Changes** Brian Huntley, Wolfgang Cramer, Alan V. Morgan, Honor C. Prentice, Judy R.M. Allen, 2013-06-29
 Numerous experts including ecologists geneticists paleontologists and climatologists investigate the response of terrestrial
 organisms to changes in their environment The volume comprises an introductory and a final chapter by the editors as well
 as another 35 contributions These are divided into six sections 1 past environmental changes the late Quaternary 2 spatial
 responses to past changes 3 mechanisms enabling spatial responses 4 evolutionary responses to past changes 5 mechanisms
 enabling evolutionary responses 6 predicted future environmental changes and simulated responses The overwhelming and
 unanimous conclusion of all contributors is that forecasted global environmental changes pose a severe threat to the integrity
 of ecosystems worldwide and to the survival of at least some species *Psychosocial Genetic Counseling* Jon
 Weil, 2000-09-07 Psychosocial issues are integral to all genetic counseling interactions They include counselees beliefs about
 the cause of birth defects and genetic disorders the cognitive procession of medical information and risk figures emotions
 such as anxiety and guilt and the complex process of decision making Drawing on direct clinical experience and the growing
 body of relevant literature Psychosocial Genetic Counseling provides a comprehensive integrated approach to understanding
 these issues and their applications to genetic counseling The book combines theoretical and practical approaches including
 many clinical vignettes and examples of dialogue It is written in an engaging style that conveys the emotional immediacy of
 genetic counseling The emotional and social effects of genetic disorders are discussed with reference to the individual and to
 couple family and social interactions Counseling techniques and the agenda of the genetic counseling session are then
 addressed in detail Specialized aspects of prenatal diagnosis counseling cancer risk counseling and genetic counseling with
 children and adolescents are integrated with these general principles Nondirective counseling and the psychology of risk
 interpretation and decision making are discussed from theoretical and historical perspectives leading to recommendations
 for their application to clinical practice The influences of ethnocultural history beliefs and practices for counselee and
 counselor are then discussed as they enter into all aspects of genetic counseling *Searching for the Future in the Past*
 Keun-joo Christine Pae, Kathleen T. Talvacchia, 2024-10-17 Inclusive and progressive theological and religious perspectives
 have an important and distinctive contribution to make to an analysis of the critical issues facing women identified persons in
 the 21st century This incisive collection of essays recovers the missing theological voices grounded in those religious
 communities and traditions which gender and sexuality studies often overlook Feminist theologies have from their beginnings
 aspired to be the communal production of women identified persons who critically reflect on their experiences in the contexts
 of culture social standpoint religious practices and beliefs and imagination of the Feminine Divine Pae and Talvacchia draw

from this heritage to engage the critical issues of today to create new perspectives They create an intellectual and discursive space where feminist theologians in all of their diversity renew and reclaim the rich legacies of the feminist theological tradition through inter generational racially diverse and transnational conversation **Ethics and Human Genetics**

Dorothy C. Wertz, John C. Fletcher, 2012-12-06 Based in part on a survey of ethical decision making among 682 medical geneticists worldwide this book includes a chapter authored by a geneticist and an ethicist in 19 nations describing genetic services counselling screening prenatal diagnosis and major ethical problems and social controversies faced by geneticists The concluding chapter describes ethical and policy issues that exist worldwide and offers some possible resolutions The

Cnidaria, Past, Present and Future Stefano Goffredo, Zvy Dubinsky, 2016-09-07 This volume presents a broad panorama of the current status of research of invertebrate animals considered belonging to the phylum Cnidaria such as hydra jellyfish sea anemone and coral In this book the Cnidarians are traced from the Earth's primordial oceans to their response to the warming and acidifying oceans Due to the role of corals in the carbon and calcium cycles various aspects of cnidarian calcification are discussed The relation of the Cnidaria with Mankind is approached in accordance with the Editors philosophy of bridging the artificial schism between science arts and Humanities Cnidarians encounters with humans result in a broad spectrum of medical emergencies that are reviewed The final section of the volume is devoted to the role of Hydra and Medusa in mythology and art **Birth controlled** Amrita Pande, 2022-06-14 Birth controlled analyses the world of

selective reproduction the politics of who gets to legitimately reproduce the future through a cross cultural analysis of three modes of controlling birth contraception reproductive violence and repro genetic technologies It argues that as fertility rates decline worldwide the fervour to control fertility and fertile bodies does not dissipate what evolves is the preferred mode of control Although new technologies like those that assist conception or allow genetic selection may appear to be an antithesis of other violent versions of population control this book demonstrates that both are part of the same continuum All population control policies target and vilify women Black women in particular and coerce them into subjecting their bodies to state and medical surveillance Birth controlled argues that assisted reproductive technologies and repro genetic technologies employ a similar and stratified burden of blame and responsibility based on gender race class and caste To empirically and historically ground the analysis the book includes contributions from two postcolonial nations South Africa and India examining interactions between the history of colonialism and the economics of neoliberal markets and their influence on the technologies and politics of selective reproduction The book provides a critical interdisciplinary and cutting edge dialogue around the interconnected issues that shape reproductive politics in an ostensibly post population control era The contributions draw on a breadth of disciplines ranging from gender studies sociology medical anthropology politics and science and technology studies to theology public health and epidemiology facilitating an interdisciplinary dialogue around the interconnected modes of controlling birth and practices of neo eugenics *When Reproduction meets Ageing* Nolwenn

Bühler,2021-05-27 When Reproduction meets Ageing questions the nature of reproductive ageing and reproductive biomedicine *In the Name of Eugenics* Daniel J. Kevles,1995 Daniel Kevles traces the study and practice of eugenics the science of improving the human species by exploiting theories of heredity from its inception in the late nineteenth century to its most recent manifestation within the field of genetic engineering It is rich in narrative anecdote attention to human detail and stories of competition among scientists who have dominated the field Futures of Reproduction Catherine Mills,2011-06-01 Issues in reproductive ethics such as the capacity of parents to choose children present challenges to philosophical ideas of freedom responsibility and harm This book responds to these challenges by proposing a new framework for thinking about the ethics of reproduction that emphasizes the ways that social norms affect decisions about who is born The book provides clear and thorough discussions of some of the dominant problems in reproductive ethics human enhancement and the notion of the normal reproductive liberty and procreative beneficence the principle of harm and discrimination against disability while also proposing new ways of addressing these The author draws upon the work of Michel Foucault especially his discussions of biopolitics and norms and later work on ethics alongside feminist theorists of embodiment to argue for a new bioethics that is responsive to social norms human vulnerability and the relational context of freedom and responsibility This is done through compelling discussions of new technologies and practices including the debate on liberal eugenics and human enhancement the deliberate selection of disabilities PGD and obstetric ultrasound

Anthropology of Reproduction: The Basics Sallie Han,Cecília Tomori,2025-02-24 Anthropology of Reproduction The Basics is a clear and accessible guide to topics in reproduction from the perspective of anthropology emphasizing the central importance of reproduction in human sociocultural and biological experience It examines why reproduction matters so much to human beings and what anthropology offers to better understand their decisions about having or not having children and their experiences with periods infertility contraception abortion pregnancy pregnancy loss birth and care for children The book shows that all of reproduction is shaped by our evolution prehistory and history as well as the cultural social political and economic contexts and conditions that impact our lives It tells the story of how these conditions enable support constrain or coerce reproduction and how people around the world survive or thrive within comply with or resist against these forces to create their reproductive futures Its primary goals are to promote an understanding of human reproduction as sociocultural and biological experience awareness of and attention to the sociocultural historical political and economic contexts and conditions influence the ideas and practices of human reproduction particularly how social inequities shape reproduction and in turn how we can move towards more equal and just reproductive futures to introduce and reinforce an understanding of anthropology as a discipline taking a holistic approach to human experiences This student friendly text provides an overview of the fundamental principles of reproduction and is an invaluable guide for anyone wanting to learn more about this fascinating subject It is an essential read for students approaching the subject for the first time as well as

researchers coming to the topic from another discipline in the sciences and humanities Reproduction, Globalization, and the State Carole H. Browner, Carolyn F. Sargent, 2011-03-25 Collection uses ethnographies of globalization to explore the consequences of interactions between global processes and national structures on human reproduction and reproductive health in a range of contexts **Transgenerational Media Industries** Derek Johnson, 2019-11-12 Within corporate media industries adults produce children's entertainment. Yet children presumed to exist outside the professional adult world make their own contributions to it creating and posting unboxing videos for example that provide content for toy marketers. Many adults meanwhile avidly consume entertainment products nominally meant for children. Media industries reincorporate this market disrupting participation into their strategies even turning to adult consumers to pass fandom to the next generation. Derek Johnson presents an innovative perspective that looks beyond the simple category of kids media to consider how entertainment industry strategies invite producers and consumers alike to cross boundaries between adulthood and childhood professional and amateur new media and old. Revealing the social norms reproductive ideals and labor hierarchies on which such transformations depend he identifies the lines of authority and power around which legacy media institutions like television comics and toys imagine their futures in a digital age. Johnson proposes that it is not strategies of media production but of media reproduction that are most essential in this context. To understand these critical intersections he investigates transgenerational industry practice in television co-viewing recruitment of adult comic readers as youth outreach ambassadors media professionals' identification with childhood the branded management of adult fans of LEGO and the labor of child YouTube video creators. These dynamic relationships may appear to disrupt generational and industry boundaries alike. However by considering who media industries empower when generating the future in these reproductive terms and who they leave out Johnson ultimately demonstrates how their strategies reinforce existing power structures. This book makes vital contributions to media studies in its fresh approach to the intersections of adulthood and childhood its attention to the relationship between legacy and digital media industries and its advancement of dialogue between media production and consumption researchers. It will interest scholars in media industry studies and across media studies more broadly with particular appeal to those concerned about the current and future reach of media industries into our lives.

Gender, Sexuality, and Space Culture Kat Deerfield, 2019-08-28 Gender Sexuality and Space Culture explores how traditional ideologies of gender and sexuality have influenced the culture of space travel. The time since humans first began exploring outer space has been marked by both great technological development and great social upheaval. Yet while the rapid technological advancement of the mid to late twentieth century made human spaceflight a reality the field has shown some resistance to cultural change over the same period. Ideas about the body in space and the future of humanity are at the core of the development of human spaceflight. This book examines how these have been constructed as specifically a male body and a heterosexual future. These presumptive norms are not unusual but this book argues that the unique attributes of

outer space can be productively used in advancing theories of culture beyond the extra terrestrial
