## **Research Directions In Software Technology:**

**Research Directions in Software Technology** Peter Wegner, 1979-01 The primary purpose of this book is to provide an understandable but nontrivial description by active research workers of concepts and research issues in principal subareas of software technology. It should be useful to both the specialist and the technical layman as a source of factual information about research issues and can serve as a starting point for discussions of what to do next. We hope it will make practitioners aware of the practical contributions of research, make researchers aware of the needs of technology and serve to stimulate greater collaboration between practitioners and research workers. An even more ambitious objective is to encourage dialogue among research workers in different areas such as computer architecture, programming languages and data base management so that the basis for an integrated approach to computer systems can be established. Last but not least, this study may be useful to funding agencies and other policy making bodies in making policy decisions concerning future support of research.

**Metrics-driven Enterprise Software Development** Subhajit Datta, 2007-08-15 Metrics for software development are usually employed ad hoc and without clear directions for interpreting the numbers and acting on them. Almost every other engineering discipline has clear guidelines for measuring processes and products and making decisions based on quantified evidence. This practical book describes how to integrate processes and metrics to ensure easier and more effective enterprise software development. It crosses the divide between theory and practice and also discusses why essential processes so often fail to deliver quality industrial software. Enterprise Software Development introduces the techniques for building, applying and interpreting metrics for the workflows across the software development life cycle phases of inception, elaboration, construction and transition. It is a must read for software engineering practitioners, architects, application developers, designers and project managers, academics and students and apprentices of software engineering.
