Gliner,George A.

Morgan,Nancy L. Leech,2000-02-01 The authors of this unique text found that while most students can crunch the numbers quite easily and accurately with a calculator or computer many have trouble seeing the big picture or seeing how research questions and design influence data analysis As a result the authors developed a semantically consistent framework that integrates traditional research approaches experimental quasi experimental comparative into three basic kinds of research questions difference associational and descriptive which in turn lead to three kinds or groups of statistics with the same names This text helps students become good consumers of research by demonstrating how to analyze and evaluate research articles offers a number of summarizing diagrams and tables that clarify confusing or difficult to learn topics points out the

value of qualitative research and how it should lead quantitative researchers to be more flexible divides all quantitative research questions into five logically consistent categories that help students select appropriate statistics and understand their cause and effect and classifies design into three major types between groups within subjects and mixed groups and shows that although these three types use the same general type of statistics e.g. ANOVA the specific statistics in between groups design are different from those in within subjects and mixed groups
