McIntyre, 2012-12-06 This section will consider the structure and function of muscle receptors as well as the central nervous system mechanisms with which they are concerned In volume I of this Handbook receptor mechanisms are discussed in detail Also the crustacean stretch receptor and the frog muscle spindle have been considered The present section will be concerned with vertebrate muscle receptors with an emphasis on mammals Muscle receptors provide interesting examples of specialized mechanoreceptors The muscle spindle is a striking case of a receptor which is regulated in its function by the central nervous system in efferent neurons Muscle receptors have long been known to play a crucial role in the reflex regulation of movement In recent years it has become apparent that these receptors are also important in sensory phenomena such as the perception of position and movement St Louis July 1974 c c HUNT Contents Chapter I The Morphology of Muscle Receptors By D BARKER With 99 Figures 1 Chapter II The Physiology of Muscle Receptors By C C HUNT With 21 Figures 191 Chapter III Central Actions of Impulses in Muscle Afferent Fibres By A K McINTYRE With 8 Figures 235 Author Index 289 Subject Index 299 List of Contributors BARKER David Department of Zoology University of Durham Science Laboratories South Road Durham DH1 3LE Great Britain HUNT Carlton C Department of Physiology and Biophysics Washington University School of Medicine 660 South Euclid Avenue St Louis Mo 63110 USA McINTYRE A K

Skeletal Muscle Henning Schmalbruch, 2012-12-06 This volume is intended to cover research in the field of muscle morphology since publication of the previous edition by Haggquist in 1956 The development of new techniques coupled with an intensified interest in muscle has resulted in a vast literature which no single person could review especially within the limitations of one volume When I accepted the flattering offer to write a new edition I quickly abandoned any hope of a comprehensive review Instead I tried to consider within my limits those lines of research which I believe to be important for the understanding of mammalian and ultimately human muscles under normal experimental and

pathological conditions It would be naive to suggest that muscle can be adequately described in purely morphological aspects I would characterize the results of my effort as muscle as seen with the eyes of a morphologist It gives me pleasure to acknowledge the help of several colleagues who read and commented on drafts of individual chapters Dr Brenda Eisenberg Chicago Dr Else Nygaard Copenhagen Dr Stefano Schiaffino Padova Dr Michael Sjostrom Umea Dr Lars Erik Thornell Umea None of these individuals can be held responsible for any error or obscurity that persists Indeed without their assistance there would have been more I also thank those colleagues who allowed me to include their published and unpublished material their names and also those of the publishers who kindly granted copyright permission are given in the individual figure captions

The Biochemistry of Gene Expression in Higher Organisms J.K. Pollak, J.W. Lee, 2013-03-09 The papers assembled in this volume are based on the symposium on The Biochemistry of Gene Expression in Higher Organisms which was held at the University of Sydney from May 14-19 1972 Many symposia have been held on the control of gene expression in prokaryotes but to date considerably less attention has been paid to eukaryotic organisms It has been appreciated only recently that some of the information gained from the study of prokaryotes is directly applicable to eukaryotes however it is now realized that the principles of the control mechanisms of gene expression in these two classes of organism differ considerably This symposium was organized in an effort to bring together workers from widely different fields concerned with gene expression with the aim of circumscribing the current concepts and speculating on future developments in studies on the mechanisms which control and modulate gene expression in the widest sense in eukaryotes This volume contains all the 36 papers presented at the symposium In a few instances the sequence of contributions has been changed to provide the reader with a more logical presentation In addition three papers which were not actually presented at the symposium have been included in this volume These three papers were not read because last minute hitches prevented speakers from attending

Growth, Nutrition, and Metabolism of Cells In Culture V2 George Rothblat, 2012-12-02 Growth Nutrition and Metabolism of Cells in Culture Volume 2 summarizes the state of knowledge of the growth nutrition and metabolism of various types of cell cultures The chapters are both detailed and comprehensive enough for the specialist and broad enough to provide a general background for the nonspecialist The present volume deals with specialized mammalian plant and invertebrate cell systems and techniques The book begins by tracing the history of the development of tissue culture This is followed by separate chapters on the use of perfusion systems in cell and tissue culture and the cultivation of muscle tissue nerve tissue and hematopoietic cells Subsequent chapters discuss the use of cell culture to study mechanisms of hormone action the cultivation of mammalian embryos cultivation of cells from poikilothermic vertebrates and the cultivation of arthropod cells and plant cells This book will be a valuable resource

Durbaba,M.H.
