Planning Your Research And How To Write It Abdul Aziz Nather, 2015-10-21 This book is a practical guide for residents and young researchers who are planning to embark on research. It details the significant planning one must first do including choosing a suitable experienced clinician as a supervisor, sourcing for a winning idea with significant clinical impact, performing a proper review of literature, defining clearly the objectives to be set and adopting the appropriate methodology. Statistical evaluation must be done from the start of the research to define adequate sample size and also for evaluation of the results. It also advises how one should draw upon relevant and appropriate conclusions from the results obtained. The ethics of research is also discussed. An all important factor in research is the procurement of research grants. Readers are guided how to write a proper research proposal to secure these much needed grants. Many research papers end up as presentations only in local or international conferences. An important additional objective of this book is to guide young researchers how to write their finished product as a publication in an important international refereed journal or as a thesis. Chapters have been specially written with tips for scientific writing, selecting the right journal, writing for an original article for a journal, a review article, a case report as well as for a thesis. Research Writing uses a reverse engineering approach to writing developed from extensive work with STEM researchers at Imperial College London. This approach unpacks current models of STEM research writing and helps writers to generate the writing tools needed to operate those models effectively in their own field. The reverse engineering approach also ensures that writers develop future proof strategies that will evolve alongside the coming changes in research communication platforms. The Second Edition has been extensively revised and updated to represent current practice and focuses on the writing needs of both early stage doctoral STEM researchers and experienced professional researchers at the highest level whether or not they are native speakers of English. The book retains the practical user friendly format of the First Edition and now contains seven units that deal separately with the components of written STEM research communication: Introduction, Methods, Results, Discussion, Conclusion, Abstract, and Title, as well as extensive FAQ responses and a new Checklist and Tips section. Each unit analyses extracts from recent published STEM journal papers to enable researchers to discover not only what to write but crucially how to write it. The global nature of science research requires fast accurate communication of highly complex information that can be understood by all participants. Like the First Edition, the Second Edition is intended as a fast do it yourself guide to make both the process and the product of STEM research writing more effective.

Narratives of Qualitative Research Josh Tenenbergh, 2024-05-21. Narratives of

Qualitative Research uses a novel form of writing about how to do qualitative research called a praxis narrative. Each narrative is told from the author's perspective in carrying out one of his past research studies in the social sciences. Told chronologically and in a first person voice, the narratives position the reader alongside the narrator so as to vicariously experience how research happens in its situated particulars. Rather than a set of idealizations and universalized pronouncements, the author reveals what really goes on when one is in the thick of complex and challenging research studies: the points of trouble along with the successes. This will be relevant to researchers who have already undertaken one or more empirical research studies though not necessarily using qualitative approaches and now find themselves facing something new: a new analytic method, a new theoretical lens, a new form of data collection, a new domain of research questions, a new rhetorical approach. This requires letting go of the secure handholds of prescribed methods and responding to the contingencies that arise in the midst of the research. The reader is invited to follow along as the author makes visible his praxis of qualitative research. Unlike more conventional texts, in this unique alternative the reader can follow the author's journey through his research studies as a way to reorient their conception of qualitative research and their own praxis of it. This is fascinating reading for qualitative researchers and students taking qualitative research courses across the social sciences, education, and behavioural sciences.
