Lord Kelvins Machine:

Lord Kelvin's Machine James P. Blaylock, 2013-03-12 Within the magical gears of Lord Kelvin's incredible machine lies the secret of time. The deadly Dr Ignacio Narbondo would murder to possess it and scientist and explorer Professor Langdon St Ives would do anything to use it. For the doctor it means mastery of the world and for the professor it means saving his beloved wife from death. A daring race against time begins.

Lord Kelvin Paul Tunbridge, 1992 Kelvin's great accomplishment was to bring together all the experimental scientists of his time into one co-operative association for investigators whose individual efforts were aided by their combined results expressed in a notation and described in language understood by everyone.

Re-inventing the Ship Don Leggett, 2016-04-08 Ships have histories that are interwoven with the human fabric of the maritime world. In the long nineteenth century these histories revolved around the re-invention of these once familiar objects in a period in which Britain became a major maritime power. This multi-disciplinary volume deploys different historical, geographical, cultural and literary perspectives to examine this transformation and to offer a series of interconnected considerations of maritime technology and culture in a period of significant and lasting change. Its ten authors reveal the processes involved through the eyes and hands of a range of actors including naval architects, dockyard workers, commercial shipowners and Navy officers. By locating the ship's re-invention within the contexts of builders, owners and users, they illustrate the ways in which material elements as well as scientific, artisan and seafaring ideas and practices were bound together in the construction of ships' complex identities.

Belinda Barnet, 2013-07-15 This book explores the history of hypertext, an influential concept that forms the underlying structure of the World Wide Web and innumerable software applications. Barnet tells both the human and the technological story by weaving together contemporary literature and her exclusive interviews with those at the forefront of hypertext innovation, tracing its evolutionary roots back to the analogue machine imagined by Vannevar Bush in 1945.

Jerri, 2013-03-09 This book represents the first attempt at a unified picture for the presence of the Gibbs or Gibbs-Wilbraham phenomenon in applications, its analysis and the different methods of filtering it out.

The analysis and filtering cover the familiar Gibbs phenomenon in Fourier series and integral representations of functions with jump discontinuities. In addition, it will include other representations such as general orthogonal series expansions.

general integral transforms splines approximation and continuous as well as discrete wavelet approximations The material in this book is presented in a manner accessible to upperclassmen and graduate students in science and engineering as well as researchers who may face the Gibbs phenomenon in the varied applications that involve the Fourier and the other approximations of functions with jump discontinuities Those with more advanced backgrounds in analysis will find basic material results and motivations from which they can begin to develop deeper and more general results We must emphasize that the aim of this book the first on the subject to satisfy such a diverse audience is quite difficult In particular our detailed derivations and their illustrations for an introductory book may very well sound repetitive to the experts in the field who are expecting a research monograph To answer the concern of the researchers we can only hope that this book will prove helpful as a basic reference for their research papers

Time Machines Paul J. Nahin, 2001-04-20 This book explores the idea of time travel from the first account in English literature to the latest theories of physicists such as Kip Thorne and Igor Novikov This very readable work covers a variety of topics including the history of time travel in fiction the fundamental scientific concepts of time spacetime and the fourth dimension the speculations of Einstein Richard Feynman Kurt Goedel and others time travel paradoxes and much more
