Lotosphere Software Development With Lotos:

LOTOSphere: Software Development with LOTOS Tommaso Bolognesi, Jeroen van de Lagemaat, Chris Vissers, 2012-12-06 LOTOS Language Of Temporal Ordering Specification became an international standard in 1989 although application of preliminary versions of the language to communication services and protocols of the ISO OSI family dates back to 1984 This history of the use of LOTOS made it apparent that more advantages than the pure production of standard reference documents were to be expected from the use of such formal description techniques LOTOSphere Software Development with LOTOS describes in depth a five year project that moved LOTOS out of the ISO tower into software engineering practice LOTOS became a vehicle for efficient yet formally based industrial software specification design verification implementation and testing LOTOSphere Software Development with LOTOS is divided into six parts The first introduces the reader to LOTOS and the project LOTOSphere The five remaining each treat an important part of the software development life cycle using LOTOS This is the first book to give a comprehensive treatment of the use of these formal description techniques in a software engineering environment It will thus be a valuable reference for researchers and software developers and can also be used as a text for an advanced course on the subject

Feature Interactions in Telecommunications and Software Systems VI Muffy Calder, Evan Magill, 2000 Typically telecommunications services are implemented in software Feature interaction is the term used to describe interference between services or features most attention is given to cases where the interference is undesirable ie there is an incompatibility In telecommunications control and data is distributed and on such a large scale that software development is by numerous disjoint teams by its nature therefore this software experienced the feature interaction problem first But while the workshop focuses on communications services the subject has relevance to any domain where separate software entities control a shared resource
