

The book cover features a close-up photograph of a young woman with long, wavy blonde hair, wearing dark sunglasses with a blue frame. She is smiling slightly and looking towards the camera. The background of the photo is a bright yellow. The author's name 'SARAH SKY' is printed in white capital letters at the top. A blue oval quote is in the upper right. The title 'JESSICA COLE MODEL SPY' is in the center, with 'MODEL' in white and 'SPY' in blue. Below it, 'FASHION ASSASSIN' is written in blue and white.

Traditionally research on model driven engineering MDE has mainly focused on the use of models at the design implementation and verification stages of development This work has produced relatively mature techniques and tools that are currently being used in industry and academia However software models also have the potential to be used at runtime to monitor and verify particular aspects of runtime behavior and to implement self capabilities e g adaptation technologies used in self healing self managing self optimizing systems A key benefit of using models at runtime is that they can provide a richer semantic base for runtime decision making related to runtime system concerns associated with autonomic and adaptive systems This book is one of the outcomes of the Dagstuhl Seminar 11481 on models run time held in November December 2011 discussing foundations techniques mechanisms state of the art research challenges and applications for the use of runtime models The book comprises four research roadmaps written by the original participants of the Dagstuhl Seminar over the course of two years following the seminar and seven research papers from experts in the area The roadmap papers provide insights to key features of the use of runtime models and identify the following research challenges the need for a reference architecture uncertainty tackled by runtime models mechanisms for leveraging runtime models for self adaptive software and the use of models at runtime to address assurance for self adaptive systems

Just Enough R! Richard J. Roiger, 2020-05-20 Just Enough R An Interactive Approach to Machine Learning and Analytics presents just enough of the R language machine learning algorithms statistical methodology and analytics for the reader to learn how to find interesting structure in data The approach might be called seeing then doing as it first gives step by step explanations using simple understandable examples of how the various machine learning algorithms work independent of any programming language This is followed by detailed scripts written in R that apply the algorithms to solve nontrivial problems with real data The script code is provided allowing the reader to execute the scripts as they study the explanations given in the text Features Gets you quickly using R as a problem solving tool Uses RStudio's integrated development environment Shows how to interface R with SQLite Includes examples using R's Rattle graphical user interface Requires no prior

knowledge of R machine learning or computer programming Offers over 50 scripts written in R including several problem solving templates that with slight modification can be used again and again Covers the most popular machine learning techniques including ensemble based methods and logistic regression Includes end of chapter exercises many of which can be solved by modifying existing scripts Includes datasets from several areas including business health and medicine and science About the Author Richard J Roiger is a professor emeritus at Minnesota State University Mankato where he taught and performed research in the Computer and Information Science Department for over 30 years *Real Time Programming*
