Modeling and Analysis of Linear Hyperbolic Systems of Balance Laws Krzysztof Bartecki, 2015-12-21 This monograph focuses on the mathematical modeling of distributed parameter systems in which mass energy transport or wave propagation phenomena occur and which are described by partial differential equations of hyperbolic type The case of linear or linearized 2×2 hyperbolic systems of balance laws is considered i e systems described by two coupled linear partial differential equations with two variables representing physical quantities depending on both time and one dimensional spatial variable Based on practical examples of a double pipe heat exchanger and a transportation pipeline two typical configurations of boundary input signals are analyzed collocated wherein both signals affect the system at the same spatial point and anti collocated in which the input signals are applied to the two different end points of the system The results of this book emerge from the practical experience of the author gained during his studies conducted in the experimental installation of a heat exchange center as well as from his research experience in the field of mathematical and computer modeling of dynamic systems The book presents valuable results concerning their state space transfer function and time domain representations which can be useful both for the open loop analysis as well as for the closed loop design The book is primarily intended to help professionals as well as undergraduate and postgraduate students involved in modeling and automatic control of dynamic systems

Modelling, Analysis and Design of Hybrid Systems S. Engell, G. Frehse, E. Schnieder, 2003-07-01 In 1995 the Deutsche Forschungsgemeinschaft DFG the largest public research funding organization in Germany decided to launch a priority program Schwerpunktprogramm in German called Kondisk Dynamics and Control of Systems with Mixed Continuous and Discrete Dynamics Such a priority program is usually sponsored for six years and supports about twenty scientists at a time in engineering and computer science mostly young researchers working for a doctoral degree There is a yearly competition across all disciplines of arts and sciences for the funding of such programs and the group of proposers was the happy winner of a slot in that year The program started in 1996 after an open call for proposals the successful projects were presented and re evaluated periodically and new projects could be submitted simultaneously During the course of the focused research program 25

different projects were funded in 19 participating university institutes some of the projects were collaborative efforts of two groups with different backgrounds mostly one from engineering and one from computer science There were two main motivations for establishing Kondisk The first was the fact that technical systems nowadays are composed of physical components with mostly continuous dynamics and computerized control systems where the reaction to discrete events plays a major role implemented in Programmable Logic Controllers PLCs Distributed Control Systems DCSs or real time computer systems
