Large-Order Behaviour of Perturbation Theory J.C. Le Guillou, J. Zinn-Justin, 2012-12-02 This volume is concerned with the determination of the behaviour of perturbation theory at large orders in quantum mechanics and quantum field theory and its application to the problem of summation of perturbation series Perturbation series in quantum field theory and in many quantum mechanics models are only asymptotic and thus diverge for all values of the expansion parameter Their behaviour at large orders provides information about whether they define the theory uniquely the problem of Borel summability It suggests methods to extract numerical information from the series when the expansion parameter is not small The articles reprinted here deal with the explicit evaluation of large order behaviour in many quantum mechanics and field theory models The large order behaviour is related to barrier penetration effects for unphysical values of the expansion parameter which can be calculated by WKB or instanton methods The calculation of critical exponents of 4 field theory is presented as a practical application

Exploring Mathematics Craig Johnson, 2014-08 Exploring Mathematics Investigations with Functions is intended for a one or two term course in mathematics for college students majoring in the social sciences English history music art education or any of the other majors within liberal arts The mathematics course of this scope with an algebra prerequisite is a popular selection for liberal arts students This 9 chapter textbook offers modern applications of mathematics in the liberal arts as well as aesthetic features of this rich facet of history and ongoing advancement of human society With a central theme around the use of the concept of functions and the inclusion of unique topics and chapters Exploring Mathematics enables students to explore the next level of mathematics It attempts to answer the questions How does mathematics help us to better our society and understand the world around us and What are some of the unifying ideas of mathematics The central theme helps to impress upon the student the feeling that mathematics is more than a disconnected potpourri of rules and tricks Although it would be inappropriate to force a functional connection in every single section the theme is used whenever possible to provide conceptual bridges between chapters Developing the concept of a function augments the presentation of many topics in every chapter The Text s Objectives The author chose the topics based on meeting the specific NCTM curriculum standards to 1 Strengthen estimation and computational skills 2 Utilize algebraic concepts 3 Emphasize problem solving and reasoning 4 Emphasize pattern and relationship recognition 5 Highlight importance of units in measurement 6 Highlight importance of the notion of a mathematical function 7 Display mathematical connections to other disciplines

Transactions on Large-Scale Data- and Knowledge-Centered Systems III Abdelkader Hameurlain,Josef Küng,Roland Wagner,2011-08-02 The LNCS journal Transactions on Large Scale Data and Knowledge Centered Systems focuses on data management knowledge discovery and knowledge processing which are core and hot topics in computer science Since the 1990s the Internet has become the main driving force behind application development in all domains An increase in the demand for resource sharing across different sites connected through networks has led to an evolution of data and knowledge management systems from centralized systems to decentralized systems enabling large scale distributed applications providing high scalability Current decentralized systems still focus on data and knowledge as their main resource Feasibility of these systems relies basically on P2P peer to peer techniques and the support of agent systems with scaling and decentralized control Synergy between Grids P2P systems and agent technologies is the key to data and knowledge centered systems in large scale environments This the third issue of Transactions on Large Scale Data and Knowledge Centered Systems contains two kinds of papers Firstly a selection of the best papers from the third International Conference on Data Management in Grid and Peer to Peer Systems Globe 2010 and secondly a selection of 6 papers from the 18 papers submitted in response to the call for papers for this issue The topics covered by this special issue include replication the semantic web information retrieval data storage source selection and large scale distributed applications

astoundingly parsimonious deterministic nonlinear models Nonlinear Time Series Analysis NLTS is a collection of empirical tools designed to aid practitioners detect whether stochastic or deterministic dynamics most likely drive observed complexity Practitioners become data detectives accumulating hard empirical evidence supporting their modelling approach This book is targeted to professionals and graduate students in engineering and the biophysical and social sciences Its major objectives are to help non mathematicians with limited knowledge of nonlinear dynamics to become operational in NLTS and in this way to pave the way for NLTS to be adopted in the conventional empirical toolbox and core coursework of the targeted disciplines Consistent with modern trends in university instruction the book makes readers active learners with hands on computer experiments in R code directing them through NLTS methods and helping them understand the underlying logic please see [www.marco.bittelli.com](http://www.marco.bittelli.com) The computer code is explained in detail so that readers can adjust it for use in their own work The book also provides readers with an explicit framework condensed from sound empirical practices recommended in the literature that details a step by step procedure for applying NLTS in real world data diagnostics
