4.0 Systems and Related Logistics and IT Infrastructures K. Dimitrov, 2018-09-14 Industry and government are increasingly reliant on an intelligent or smart and interconnected computer infrastructure but the reality is that it is extremely difficult to provide full cyber defense and or intrusion prevention for the smart networks that connect intelligent industrial and logistics modules since the more intelligent the systems are the more vulnerable they become This book presents papers from the NATO Advanced Research Workshop ARW on Cyber Defence in Industry 4 0 Systems and Related Logistics and IT Infrastructures held in Jyväskylä Finland in October 2017 The main focus of the 11 papers included here is the creation and implementation of cyber systems and cyber platforms capable of providing enhanced cyber security and interoperability for smart IT infrastructure Topics covered include smart intrusion prevention adaptive cyber defense smart recovery of systems and the smart monitoring control and management of Industry 4 0 complexes and related logistics systems such as robotic equipment logistics modules units and technologic equipment as well as their IT infrastructure *Modeling and Simulation*, 1986 **Limited Scientific and Technical Aerospace Reports**, 1976 **Model Predictive Control of Wind Energy Conversion Systems** Venkata Yaramasu, Bin Wu, 2016-11-23 Model Predictive Control of Wind Energy Conversion Systems addresses the predictive control strategy that has emerged as a promising digital control tool within the field of power electronics variable speed motor drives and energy conversion systems The authors provide a comprehensive analysis on the model predictive control of power converters employed in a wide variety of variable speed wind energy conversion systems WECS The contents of this book includes an overview of wind energy system configurations power converters for variable speed WECS digital control techniques MPC modeling of power converters and wind generators for MPC design Other topics include the mapping of continuous time models to discrete time models by various exact approximate and quasi exact discretization methods modeling and control of wind turbine grid side two level and multilevel voltage source converters The authors also focus on the MPC of several power converter configurations for full variable speed permanent magnet synchronous generator based WECS squirrel cage induction generator based WECS and semi variable speed doubly fed induction generator based WECS Furthermore this book Analyzes a wide variety of practical WECS illustrating important concepts with case studies simulations and experimental results Provides a step by step design procedure for the development of predictive control schemes for various WECS configurations Describes continuous and discrete time modeling of wind generators and power converters weighting factor selection discretization methods and extrapolation techniques Presents useful material for other power electronic applications such as variable speed motor drives power quality conditioners electric vehicles photovoltaic energy systems distributed generation and high voltage direct current transmission Explores S Function Builder programming in MATLAB environment to implement various MPC strategies through the companion website Reflecting the latest technologies in the field Model Predictive Control of Wind Energy Conversion Systems is a valuable reference for academic researchers practicing engineers and other professionals It can also
