An Introduction to Chemical Engineering Kinetics & Reactor Design Charles G. Hill, **Novel Concepts in Catalysis and Chemical Reactors** Andrzej Cybulski, Jacob A. Moulijn, Andrzej Stankiewicz, 2011-08-04 The chemical process

industry faces a tremendous challenge of supplying a growing and ever more demanding global population with the products we need. The average efficiency at which resources are converted into the final products is however still dramatically low. The most obvious solution is to carry out chemical conversions at much higher yields and selectivity and this is where active and selective catalysts and efficient chemical reactors play a crucial role. Written by an international team of highly experienced editors and authors from academia and industry, this ready reference focuses on how to enhance the efficiency of catalysts and reactors. It treats key topics such as molecular modeling, zeolites, MOFs, catalysis at room temperature, biocatalysis, catalysis for sustainability, structured reactors including membrane and microchannel reactors, switching from batch to continuous reactors, application of alternative energies and process intensification. By including recent achievements and trends, the book provides an up-to-date insight into the most important developments in the field of industrial catalysis and chemical reactor engineering. In addition, several ways of improving efficiency, selectivity, activity, and improved methods for scale-up modeling and design are presented in a compact manner.

Disorder and Mixing E. Guyon, J.P. Nadal, Yves Pomeau, 2012-12-06. CARGESE INSTITUTE ON DISORDER AND MIXING. Convection, diffusion, and reaction are the three basic mechanisms in physico-chemical hydrodynamics and chemical engineering. Both convective and diffusive processes are strongly influenced by the effect of disorder of granular matter in porous media, suspensions, fluidized beds, or by the randomness caused in turbulent flow fields. This book has been initiated by a NATO summer institute held in Cargèse, Corsica, FRANCE from June 15th to 27th 1987. Its aim was to associate statistical physicists, fluid mechanicians, and specialists of chemical engineering on the problems of the relation between disorder and mixing, and in this respect, this is a premiere. This book is made of chapters based on lectures given in the meeting. However, we have paid a considerable attention to harmonize the contents and styles of chapters made by scientists trained in different communities and using different languages and techniques to describe similar problems. The Prelude by the editors of the book introduces the different points and is a biased view of some of the important and most active aspects of the subjects developed. We wish to thank all contributors and students of the institute who gave the style of the present interdisciplinary approach. We also greatly thank Elisabeth Charlaix who has shared with us the scientific and practical organisation of the institute and Marie-France Hanseler for her technical support.
