1991, Part 2 Astronomisches Rechen-Institut, 2013-06-29 Astronomy and Astrophysics Abstracts appearing twice a year has become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences It is the most important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world *Limited Scientific and Technical Aerospace Reports* ,1977 Energy Abstracts for Policy Analysis ,1981 **Technical Abstract Bulletin** , **The Book of GENESIS** James M. Bower, David Beeman, 2012-12-06 This is the second edition of a step by step tutorial for professionals researchers and students working in the area of neuroscience in general and computational neuroscience in particular It can also be used as an interactive self study guide to understanding biological neuronal and network structure for those working in the area of artificial neural networks and the cognitive sciences The tutorials are based upon the GENESIS neural simulation system which is now being used for teaching and research in at least 26 countries The following chapters consist of a combination of edited contributions from researchers in computational neuroscience and current users of the system as well as several chapters that we have written ourselves This book and the tutorial simulations on which it is based grew out of a simulation laboratory accompanying the annual Methods in Computational Neuroscience course taught at the Marine Biological Laboratory in Woods Hole MA from 1988 to 1992 Since that time the tutorials have been further developed and refined while being used in courses taught at Caltech and several other institutions including the Crete course in Computational Neuroscience For this second edition we have made many revisions and additions based on comments suggestions and corrections from members of the GENESIS Users Group BABEL and from students and teachers who have used this book **Simulators** John S. kinds of internal attachments are analyzed Acoustic scattering experiments are described in the time domain and on the basis of the Wigner Ville distribution Acoustic propagation in the water column over elastic boundaries is studied experimentally both in laboratory tanks and in the field and is analyzed theoretically Ultrasonic nondestructive testing including such aspects like probe modelling scattering by various types of cracks receiving probes and calibration by a side drilled hole is also studied in details A comprehensive picture of these complex phenomena and other aspects is presented in the book by researchers that are experts in each of these domains giving up to date accounts of the field in all these aspects
