Workload Modeling for Computer Systems Performance Evaluation Dror G. Feitelson,2015-03-23

Reliable performance evaluations require the use of representative workloads This is no easy task since modern computer systems and their workloads are complex with many interrelated attributes and complicated structures Experts often use sophisticated mathematics to analyze and describe workload models making these models difficult for practitioners to grasp This book aims to close this gap by emphasizing the intuition and the reasoning behind the definitions and derivations related to the workload models It provides numerous examples from real production systems with hundreds of graphs Using this book readers will be able to analyze collected workload data and clean it if necessary derive statistical models that include skewed marginal distributions and correlations and consider the need for generative models and feedback from the system The descriptive statistics techniques covered are also useful for other domains

Analysis of Queueing Networks with Blocking Simonetta Balsamo,Vittoria de Nitto Persone,Raif Onvural,2013-03-14 Queueing network models have been widely applied as a powerful tool for modelling performance evaluation and prediction of discrete flow systems such as computer systems communication networks production lines and manufacturing systems Queueing network models with finite capacity queues and blocking have been introduced and applied as even more realistic models of systems with finite capacity resources and with population constraints In recent years research in this field has grown rapidly Analysis of Queueing Networks with Blocking introduces queueing network models with finite capacity and

various types of blocking mechanisms It gives a comprehensive definition of the analytical model underlying these blocking queueing networks It surveys exact and approximate analytical solution methods and algorithms and their relevant properties It also presents various application examples of queueing networks to model computer systems and communication networks This book is organized in three parts Part I introduces queueing networks with blocking and various application examples Part II deals with exact and approximate analysis of queueing networks with blocking and the condition under which the various techniques can be applied Part III presents a review of various properties of networks with blocking describing several equivalence properties both between networks with and without blocking and between different blocking types Approximate solution methods for the buffer allocation problem are presented NBS Special Publication ,1968
