Modelling Interestfree Economy A Study In Macroeconomics And Development:

Modelling Interest-free Economy Muhammad Anwar, 1987 General equilibrium macroeconomic models are considered essential for evaluating the impact of monetary and fiscal policies in an economy This aspect has not received until now significant attention This present work by Dr Muhammad Anwar develops general equilibrium models of income determination suitable for interest free economies It can be used to understand several implications of making a transition from the conventional financial system to an interest free financial system There are numerous Muslim countries seeking to adopt the new interest free system These countries may find it useful to utilize the insights gained from such study to facilitate the establishment of an Islamic interest free financial system The economic model offered in this book also shows clearly and scientifically that if the interest based financial system is replaced by the interestfree financial system then the real rates of return for savers and investors in the economy will be preserved during inflationary and deflationary periods On the other hand financial repression results when savers are badly hurt during inflationary periods in an interest bearing economy This study demonstrates that the inflation ridden developing countries would be definitely better off if they adopt the interest free financial system in place of the prevalent interest bearing system This pioneering work is a new addition to the library of Islamic Economics and an important aid to economic planners and students of Islamic Economics Modeling Interest-free Economy Muhammad Anwar, 1992 Modelling Interest-Free Economy Muhammad Anwar, 1987-01-01

Handbook of Analytical Studies in Islamic Finance and Economics Zamir Iqbal, Tarik Akin, Nabil El Maghrebi, Abbas Mirakhor, 2020-08-10 This handbook offers a unique and original collection of analytical studies in Islamic economics and finance and constitutes a humble addition to the literature on new economic thinking and global finance The growing risks stemming from higher debt slower growth and limited room for policy maneuver raise concerns about the ability and propensity of modern economies to find effective solutions to chronic problems It is important to understand the structural roots of inherent imbalance persistence in error patterns policy and governance failures as well as moral and ethical failures Admittedly finance and economics have their own failures with abstract theory bearing little relation with the real economy uncertainties and vicissitudes of economic life Economic research has certainly become more empirical despite or perhaps because of the lack of guidance from theory The analytics of Islamic economics and finance may not differ from standard frameworks methods and techniques used in conventional economics but may offer new perspectives on the making of financial crises nature of credit cycles roots of financial system instability and determinants of income disparities The focus is placed on the logical coherence of Islamic economics and finance properties of Islamic capital markets workings of Islamic banking pricing of Islamic financial instruments and limits of debt financing fiscal stimulus and conventional monetary policies inter alia Readers with investment regulatory and academic interests will find the body of analytical evidence to span many areas of economic inquiry refuting thereby the false argument that given its religious tenets Islamic economics is

intrinsically narrative descriptive and not amenable to testable implications Thus the handbook may contribute toward a redefinition of a dismal science in search for an elusive balance between rationality ethics and morality and toward a remodeling of economies based on risk sharing and prosperity for all humanity
