## **Modelling Irregularly Spaced Financial Data:**

**Modelling Irregularly Spaced Financial Data** Nikolaus Hautsch,2011-01-07 This book provides a methodological framework to model univariate and multivariate irregularly spaced financial data It gives a thorough review of recent developments in the econometric literature puts forward existing approaches and opens up new directions The book presents alternative ways to model so called financial point processes using dynamic duration as well as intensity models and discusses their ability to account for specific features of point process data like the occurrence of time varying covariates censoring mechanisms and multivariate structures Moreover it illustrates the use of various types of financial point processes to model financial market activity from different viewpoints and to construct volatility and liquidity measures under explicit consideration of the passing trading time

**Financial Econometrics Modeling: Market Microstructure, Factor Models and Financial Risk Measures** G.

Gregoriou,R. Pascalau,2010-12-13 This book proposes new methods to build optimal portfolios and to analyze market

liquidity and volatility under market microstructure effects as well as new financial risk measures using parametric and non parametric techniques In particular it investigates the market microstructure of foreign exchange and futures markets

*The Oxford Handbook of Economic Forecasting* Michael P. Clements, David F. Hendry, 2011-06-29 This Handbook provides up to date coverage of both new and well established fields in the sphere of economic forecasting The chapters are written by world experts in their respective fields and provide authoritative yet accessible accounts of the key concepts subject matter and techniques in a number of diverse but related areas It covers the ways in which the availability of ever more plentiful data and computational power have been used in forecasting in terms of the frequency of observations the number of variables and the use of multiple data vintages Greater data availability has been coupled with developments in statistical theory and economic analysis to allow more elaborate and complicated models to be entertained the volume provides explanations and critiques of these developments These include factor models DSGE models restricted vector autoregressions and non linear models as well as models for handling data observed at mixed frequencies high frequency data multiple data vintages methods for forecasting when there are structural breaks and how breaks might be forecast Also covered are areas which are less commonly associated with economic forecasting such as climate change health economics long horizon growth forecasting and political elections Econometric forecasting has important contributions to make in these areas along with how their developments inform the mainstream

Economic Dynamics and Information Jaroslav Zajac, 2007-08-01 This book analyzes the existence of equilibria in economies having a measured space of agents and a continuum of agents and commodities Excessive homogeneity with respect to agent productivity leads to instability and non uniqueness of a given stationary state and the indeterminacy of the corresponding stationary state equilibrium Sufficient heterogeneity leads to global saddle path stability uniqueness of a given stationary state and the global uniqueness of the corresponding equilibrium

**Macroeconomic Forecasting in the Era of Big Data** Peter Fuleky, 2019-11-28 This book surveys big data tools used in macroeconomic forecasting and addresses related econometric issues including how to capture dynamic relationships among variables how to select parsimonious models how to deal with model uncertainty instability non stationarity and mixed frequency data and how to evaluate forecasts among others Each chapter is self contained with references and provides solid background information while also reviewing the latest advances in the field Accordingly the book offers a valuable resource for researchers professional forecasters and students of quantitative economics

**Econometric Modelling of Stock Market Intraday Activity** Luc Bauwens, Pierre Giot, 2013-11-11 Over the past 25 years applied econometrics has undergone tremendous changes with active developments in fields of research such as time series labor econometrics financial econometrics and simulation based methods Time series analysis has been an active field of research since the seminal work by Box and Jenkins 1976 who introduced a general framework in which time series can be analyzed In the world of financial econometrics and the application of time series techniques the ARCH model of Engle

1982 has shifted the focus from the modelling of the process in itself to the modelling of the volatility of the process. In less than 15 years it has become one of the most successful fields of applied econometric research with hundreds of published papers. As an alternative to the ARCH modelling of the volatility, Taylor (1986) introduced the stochastic volatility model whose features are quite similar to the ARCH specification but which involves an unobserved or latent component for the volatility. While being more difficult to estimate than usual GARCH models, stochastic volatility models have found numerous applications in the modelling of volatility and more particularly in the econometric part of option pricing formulas. Although modelling volatility is one of the best known examples of applied financial econometrics, other topics such as factor models, present value relationships, term structure models were also successfully tackled.

Introduction to Stochastic Calculus for Finance Dieter Sondermann, 2006-12-02. Although there are many textbooks on stochastic calculus applied to finance, this volume earns its place with a pedagogical approach. The text presents a quick but by no means dirty road to the tools required for advanced finance in continuous time, including option pricing by martingale methods, term structure models in an HJM framework, and the Libor market model. The reader should be familiar with elementary real analysis and basic probability theory.

**The Econometrics of Sequential Trade Models** Stefan Kokot, 2012-08-27. The present study has been accepted as a doctoral thesis by the Department of Economics of the Johann Wolfgang Goethe University in Frankfurt am Main. It grew out of my five-year long participation in two research projects: Econometric analysis of transaction intensity and volatility on financial markets and Microstructure on financial markets, both conducted by the chair of Statistics and Econometrics Empirical Economic Research at the Department of Economics and Business Administration, Johann Wolfgang Goethe University in Frankfurt am Main, and financed by the state of Hessen. During this time, I have benefitted from many people. First and foremost, I would like to thank my thesis supervisor Prof. Dr. Reinhard Hujer for initiating and supporting my studies with great encouragement. I am also very grateful to Prof. Dr. Christian Schlag for acting as the second thesis supervisor. Furthermore, I wish to thank Prof. Dr. Joachim Grammig who introduced me to the topics covered in this study in the first place and helped me to sharpen my views on econometrics and financial market microstructure theory through many discussions and also through his willingness to work with me on several related studies.

**Financial Econometrics** Christian Gourieroux, Joann Jasiak, 2022-12-13. Financial econometrics is a great success story in economics. Econometrics uses data and statistical inference methods together with structural and descriptive modeling to address rigorous economic problems. Its development within the world of finance is quite recent and has been paralleled by a fast expansion of financial markets and an increasing variety and complexity of financial products. This has fueled the demand for people with advanced econometrics skills. For professionals and advanced graduate students pursuing greater expertise in econometric modeling, this is a superb guide to the field's frontier. With the goal of providing information that is absolutely up to date and essential in today's rapidly evolving financial environment, Gourieroux and Jasiak focus on methods related to

foregoing research and those modeling techniques that seem relevant to future advances They present a balanced synthesis of financial theory and statistical methodology Recognizing that any model is necessarily a simplified image of reality and that econometric methods must be adapted and applied on a case by case basis the authors employ a wide variety of data sampled at frequencies ranging from intraday to monthly These data comprise time series representing both the European and North American markets for stocks bonds and foreign currencies Practitioners are encouraged to keep a critical eye and are armed with graphical diagnostics to eradicate misspecification errors This authoritative state of the art reference text is ideal for upper level graduate students researchers and professionals seeking to update their skills and gain greater facility in using econometric models All will benefit from the emphasis on practical aspects of financial modeling and statistical inference Doctoral candidates will appreciate the inclusion of detailed mathematical derivations of the deeper results as well as the more advanced problems concerning high frequency data and risk control By establishing a link between practical questions and the answers provided by financial and statistical theory the book also addresses the needs of applied researchers employed by financial institutions

*High Frequency Financial Econometrics* Luc Bauwens, Winfried Pohlmeier, David Veredas, 2007-12-31 In this paper we propose a new econometric approach to jointly model the time series dynamics of the trading process and the revisions of ask and bid prices We use this model to test the validity of certain symmetry assumptions very common among microstructure models Namely we test whether ask and bid quotes respond symmetrically to trade related shocks and whether buyer initiated trades and seller initiated trades are equally informative In essence the procedure we propose generalizes Hasbrouck's 1991 vector autoregressive model for signed trades and changes in the quote midpoint by relaxing the implicit symmetry assumptions in his model The properties of the empirical model are derived from a structural dynamic model for ask and bid prices In this model ask and bid prices share a common long run component the efficient price The long term value of the stock varies due to buyer initiated shocks seller initiated shocks and trade unrelated shocks The transitory components of ask and bid prices are characterized by two correlated and trade dependent stochastic processes whose dynamics are allowed to differ The trading process is endogenous Buyer and seller initiated trades are generated by two idiosyncratic but mutually dependent stochastic processes The generating processes of quotes and trades both depend on several exogenous variables that feature the trades and the market conditions
