Richerson, 2012-09-12 Most people would be surprised at how ceramics are

used from creating cellular phones radio television and lasers to its role in medicine for cancer treatments and restoring hearing The Magic of Ceramics introduces the nontechnical reader to the many exciting applications of ceramics describing how ceramic material functions while teaching key scientific concepts like atomic structure color and the electromagnetic spectrum With many illustrations from corporations on the ways in which ceramics make advanced products possible the Second Edition also addresses the newest areas in ceramics such as nanotechnology *Ceramic Materials* Feng Shi, 2012-04-05 This text covers ceramic materials from the fundamentals to industrial applications This includes their impact on the modern technologies including nano ceramic ceramic matrix composites nanostructured ceramic membranes porous ceramics and the sintering theory model of modern ceramics **Handbook of Advanced Ceramics**, 2013-04-11 This new handbook will be an essential resource for ceramicists It includes contributions from leading researchers around the world and includes sections on Basic Science of Advanced Ceramics Functional Ceramics electro ceramics and optoelectro ceramics and engineering ceramics Contributions from more than 50 leading researchers from around the world Covers basic science of advanced ceramics functional ceramics electro ceramics and optoelectro ceramics and engineering ceramics

Approximately 750 illustrations **Ceramics and the Museum** Laura Breen, 2019-08-22 Ceramics and the Museum interrogates the relationship between art oriented ceramic practice and museum practice in Britain since 1970 Laura Breen examines the identity of ceramics as an art form drawing on examples of work by artist makers such as Edmund de Waal and Grayson Perry addresses the impact of policy making on ceramic practice traces the shift from object to project in ceramic practice and in the evolution of ceramic sculpture explores how museums facilitated multisensory engagement with ceramic material and process and analyses the exhibition as a text in itself Proposing the notion that gestures of showing such as exhibitions and installation art can be read as statements she examines what they tell us about the identity of ceramics at particular moments in time Highlighting the ways in which these gestures have constructed ceramics as a category of artistic practice Breen argues that they reveal gaps between narrative and practice which in turn can be used to deconstruct the art

Contemporary British Ceramics and the Influence of Sculpture Laura Gray, 2018-01-02 This book investigates how British contemporary artists who work with clay have managed in the space of a single generation to take ceramics from niche interest craft to the pristine territories of the contemporary art gallery This development has been accompanied and perhaps propelled by the kind of critical discussion usually reserved for the higher discipline of sculpture Ceramics is now encountering and colliding with sculpture both formally and intellectually Laura Gray examines what this means for the old hierarchies between art and craft the identity of the potter and the character of a discipline tied to a specific material but wanting to participate in critical discussions that extend far beyond clay *Materials Selection for Corrosion Control* Sohan L. Chawla, 1993-01-01 Provides a methodology for integrating materials selection with the design process including simultaneous technical and economic evaluation Save hours of frustrating research time Get fast answers about the best material for a particular application In the past researching the endless sources on corrosion and materials in their countless applications were next to impossible That s why this book was written to help simplify your materials selection problems It s an exhaustive source on the different corrosion resistant materials types of corrosion factors affecting corrosion passivation corrosion monitoring corrosion control measures methodology of materials selection and more The Persistence of Craft Paul Greenhalgh, 2003 In The Persistence of Craft contributors discuss the development of not only six specific crafts glass ceramics jewelry wood textiles and metal but also the trends and movements that have helped shape their developments Includes 180 full color illustrations Ceramic Microstructures W.E. Lee, Mark Rainforth, 1994-10-31 This text deals with the effect of processing on the microstructure and properties of advanced structural and electroceramic materials It fulfils the need for a well illustrated book explaining the relation between microstructure and properties in structural ceramics featuring high quality micrographs and characterization techniques **Immobilization of radioactive waste in ceramic based hosts: Radioactive waste Immobilization** Ashish Bohre, 2014-02-01 Ceramic materials have found numerous applications in science technology and industry as mentioned earlier One of the recent applications of titania and zirconia

based ceramic precursors is in immobilization and solidification of radioactive isotopes in waste effluents coming out of nuclear establishments and power plants Due to long term stability and integrity of the ceramic waste forms of high and intermediate level nuclear waste several countries have now switched over from glass technology to ceramic technology of radwaste management These and many more applications make ceramics materials an interesting area of research and engineering sciences The book is particularly aimed at scientific and technical staff in the nuclear and waste management industries in addition to universities and research organizations active in these areas It will also appeal to a wider audience with interests in environmental issues and will be of benefit to anyone who requires background information on radioactive issues connected with nuclear energy or defense processes or hazardous waste sources properties and treatments using crystallographic methods
