Preparing for Accreditation Prof. Satish Kumar Soni, 2014-07-17 Improving and assuring the quality of professional educational services is the only last option left for forward looking educational service enterprises or colleges or universities for surviving with pride and creating delight in customer students For relatively younger economies like India and other Asian African countries quality assurance has

become almost mandatory from both the point of views business growth and complying with the requirements of regulatory agencies Many Asian countries have become provisional signatory members of Washington Accord for facilitating global mobility of graduates from universities of one country to another country for further education and or seeking employment opportunities Recently regulatory agencies of many developing countries have adopted outcome based professional education model for formulating criteria and evaluation procedures for quality assurance and accreditation certification The author while doing consultancy work in India has felt that faculty in general are not very much aware of the requirements of outcome based education model and therefore face difficulties in preparing self assessment reports and supporting evidence record files It is hoped that this book shall be of adequate help to faculty and management of professional education institutions and universities in understanding the requirements of accreditation and in making necessary preparations of application and documentation

Engineering Education Firoz Alam,Alexandra Kootsookos,2020-12-18 This book details the key concepts objectives and processes relating to the professional accreditation of engineering bachelor honours degrees The contemporary context of accreditation is examined in terms of the globalised nature of both the engineering profession and higher education Examples of the processes relating to single and dual accreditation are provided with examination of the Washington Accord and the requirements of the European Network for Accreditation of Engineering Education Details are also provided as to how learning outcomes can be structured to demonstrate compliance with accreditation criteria The final chapters deal briefly with quality assurance processes used in education and the current international quality ranking systems which exist This book will provide the reader with a detailed examination of outcome based education within the context of Bachelor of Engineering honours degrees A key feature of this book is the side by side comparison of different accreditation criteria and a thorough discussion of the relatively new phenomenon of dual accreditation The book seeks to provide a very clear explanation and exploration of accreditation within the context of engineering education and will benefit those practitioners involved in the accreditation process

Capstone Design Courses Jay R. Goldberg,2022-06-01 The biomedical engineering senior capstone design

course is probably the most important course taken by undergraduate biomedical engineering students. It provides them with the opportunity to apply what they have learned in previous years, develop their communication, written, oral, and graphical interpersonal teamwork, conflict management, and negotiation, project management, and design skills, and learn about the product development process. It also provides students with an understanding of the economic, financial, legal, and regulatory aspects of the design development and commercialization of medical technology. The capstone design experience can change the way engineering students think about technology, society, themselves, and the world around them. It gives them a short preview of what it will be like to work as an engineer. It can make them aware of their potential to make a positive contribution to health care throughout the world and generate excitement for and pride in the engineering profession. Working on teams helps students develop an appreciation for the many ways team members with different educational, political, ethnic, social, cultural, and religious backgrounds look at problems. They learn to value diversity and become more willing to listen to different opinions and perspectives. Finally, they learn to value the contributions of nontechnical members of multidisciplinary project teams.

Ideas for how to organize, structure, and manage a senior capstone design course for biomedical and other engineering students are presented here. These ideas will be helpful to faculty who are creating a new design course, expanding a current design program to more than the senior year, or just looking for some ideas for improving an existing course.
