Modern General Topology North Holland Mathematical Library Hardcover:

Modern General Topology J.-I. Nagata, 1985-11-01 This classic work has been fundamentally revised to take account of recent developments in general topology The first three chapters remain unchanged except for numerous minor corrections and additional exercises but chapters IV VII and the new chapter VIII cover the rapid changes that have occurred since 1968 when the first edition appeared The reader will find many new topics in chapters IV VIII e g theory of Wallmann Shanin s compactification realcompact space various generalizations of paracompactness generalized metric spaces Dugundji type extension theory linearly ordered topological space theory of cardinal functions dyadic space etc that were in the author s opinion mostly special or isolated topics some twenty years ago but now settle down into the mainstream of general topology

Modern General Topology Jun-iti Nagata, 1985 **Encyclopedia of General Topology** K.P. Hart, Jun-iti Nagata, J.E. Vaughan, 2003-11-18 This book is designed for the reader who wants to get a general view of the terminology of General Topology with minimal time and effort The reader whom we assume to have only a rudimentary knowledge of set theory algebra and analysis will be able to find what they want if they will properly use the index However this book contains very few proofs and the reader who wants to study more systematically will find sufficiently many references in the book Key features More terms from General Topology than any other book ever published Short and informative articles Authors include the majority of top researchers in the field Extensive indexing of terms Topology at Infinity of Discrete Groups Ross Geoghegan, Craig R. Guilbault, Kim Ruane, 2025-02-07 This volume contains the proceedings of the AMS Special Session on Ends and Boundaries of Groups held in honor of Michael Mihalik s 70th birthday on April 15 16 2023 at the University of Cincinnati Cincinnati Ohio The papers cover current topics in geometric group theory and related topology Four survey papers discuss hyperbolic actions CAT 0 groups Thompson type groups and Z set boundaries Other papers cover new material related to hyperbolic groups Poincar Duality groups outer automorphism groups right angled Artin groups and mapping class groups Several papers present new results on ends of spaces and related group theory A notable addition intended for readers interested in the interplay of topology and group theory is a self contained detailed exposition of Z sets and their role in geometric group theory The Infinite-Dimensional Topology of Function Spaces J. van Mill, 2002-05-24 In this book we study function spaces of low Borel complexity Techniques from general topology infinite dimensional topology functional analysis and descriptive set theory are primarily used for the study of these spaces The mix of methods from several disciplines makes the subject particularly interesting Among other things a complete and self contained proof of the Dobrowolski Marciszewski Mogilski Theorem that all function spaces of low Borel complexity are topologically homeomorphic is presented In order to understand what is going on a solid background in infinite dimensional topology is needed And for that a fair amount of knowledge of dimension theory as well as ANR theory is needed The necessary material was partially covered in our previous book Infinite dimensional topology prerequisites and introduction A selection of what

was done there can be found here as well but completely revised and at many places expanded with recent results A scenic route has been chosen towards the Dobrowolski Marciszewski Mogilski Theorem linking the results needed for its proof to interesting recent research developments in dimension theory and infinite dimensional topology The first five chapters of this book are intended as a text for graduate courses in topology For a course in dimension theory Chapters 2 and 3 and part of Chapter 1 should be covered For a course in infinite dimensional topology Chapters 1 4 and 5 In Chapter 6 which deals with function spaces recent research results are discussed It could also be used for a graduate course in topology but its flavor is more that of a research monograph than of a textbook it is therefore more suitable as a text for a research seminar The book consequently has the character of both textbook and a research monograph In Chapters 1 through 5 unless stated otherwise all spaces under discussion are separable and metrizable In Chapter 6 results for more general classes of spaces are presented In Appendix A for easy reference and some basic facts that are important in the book have been collected The book is not intended as a basis for a course in topology its purpose is to collect knowledge about general topology The exercises in the book serve three purposes 1 to test the reader's understanding of the material 2 to supply proofs of statements that are used in the text but are not proven there 3 to provide additional information not covered by the text Solutions to selected exercises have been included in Appendix B These exercises are important or difficult

Tensor-Valued Random Fields for Continuum Physics Anatoliy Malyarenko, Martin Ostoja-Starzewski, 2019 Presents a complete description of homogenous and isotropic tensor valued random fields including the problems of continuum physics mathematical tools and applications

Algebraic Geometry over the Complex Numbers Donu Arapura, 2012-02-15 This is a relatively fast paced graduate level introduction to complex algebraic geometry from the basics to the frontier of the subject It covers sheaf theory cohomology some Hodge theory as well as some of the more algebraic aspects of algebraic geometry The author frequently refers the reader if the treatment of a certain topic is readily available elsewhere but goes into considerable detail on topics for which his treatment puts a twist or a more transparent viewpoint His cases of exploration and are chosen very carefully and deliberately The textbook achieves its purpose of taking new students of complex algebraic geometry through this a deep yet broad introduction to a vast subject eventually bringing them to the forefront of the topic via a non intimidating style

Books in Series, 1876-1949 R.R. Bowker Company, 1982

Topics in General Topology K. Morita, J.-I. Nagata, 1989-08-04 Being an advanced account of certain aspects of general topology the primary purpose of this volume is to provide the reader with an overview of recent developments The papers cover basic fields such as metrization and extension of maps as well as newly developed fields like categorical topology and topological dynamics Each chapter may be read independently of the others with a few exceptions It is assumed that the reader has some knowledge of set theory algebra analysis and basic general topology

Classical And Modern Optimization Guillaume Carlier, 2022-03-16 The quest for the optimal is ubiquitous in nature and human behavior The field of

mathematical optimization has a long history and remains active today particularly in the development of machine learning Classical and Modern Optimization presents a self contained overview of classical and modern ideas and methods in approaching optimization problems The approach is rich and flexible enough to address smooth and non smooth convex and non convex finite or infinite dimensional static or dynamic situations The first chapters of the book are devoted to the classical toolbox topology and functional analysis differential calculus convex analysis and necessary conditions for differentiable constrained optimization The remaining chapters are dedicated to more specialized topics and applications Valuable to a wide audience including students in mathematics engineers data scientists or economists Classical and Modern Optimization contains more than 200 exercises to assist with self study or for anyone teaching a third or fourth year optimization class

Operator Algebras and Dynamics: Groupoids, Crossed Products, and Rokhlin Dimension Aidan Sims, Gábor Szabó, Dana Williams, 2020-06-22 This book collects the notes of the lectures given at the Advanced Course on Crossed Products Groupoids and Rokhlin dimension that took place at the Centre de Recerca Matemàtica CRM from March 13 to March 17 2017 The notes consist of three series of lectures The first one was given by Dana Williams Dartmouth College and served as an introduction to crossed products of C^* algebras and the study of their structure The second series of lectures was delivered by Aidan Sims Wollongong who gave an overview of the theory of topological groupoids as a model for groups and group actions and groupoid C^* algebras with particular emphasis on the case of étale groupoids Finally the last series was delivered by Gábor Szabó Copenhagen and consisted of an introduction to Rokhlin type properties mostly centered around the work of Hirshberg Winter and Zacharias with hints to the more advanced theory related to groupoids
