Near and Distant Horizons John Herlihy,2005-03 Near and Distant Horizons In Search of the Primary Sources of Knowledge With originality and insight the author makes a compelling case for the need to identify the sources of a traditional knowledge that still has the power to enrich people s lives in today s materialistic and anti spiritual world What are the true sources of knowledge Are there headwaters for the universal laws of nature Is there a source so transcendent that it can resolve the perennial mystery concerning the origin of life and the creation of man Is there a wellspring of knowledge that can neutralize the duality of the world by offering a unified vision of the Whole This work reflects upon the significance of three principal sources of knowledge in the Islamic Traditions They are Revelation as the expression of the supreme mind of God Nature as the universal body of God and Man as the human image of God The book s absorbing inquiry and reflective style throw light on the dark mysteries that still confront people today and will appeal to readers interested in an alternative to the theories of modern science taking them on an inward journey whose destination lies far beyond the horizon of our time John Herlihy an American Muslim was educated at Boston University and Columbia University in New York City He has written a number of books on traditional themes including Modern Man at the Crossroads and Borderlands of the Spirit He is the Director of an educational program at the Petroleum Institute a new engineering university in the United Arab Emirates

1959, **Knowledge Production, Area Studies and Global Cooperation** Claudia Derichs,2017-04-27 Whereas Area Studies and cross border cooperation research conventionally demarcates groups of people by geographical boundaries

individuals might in fact feel more connected by shared values and principles than by conventional spatial dimensions Knowledge Production Area Studies and Global Cooperation asks what norms and principles lead to the creation of knowledge about cross border cooperation and connection It studies why theories methods and concepts originate in one place rather than another how they travel and what position the scholar adopts while doing research particularly in the field Taking case studies from Asia the Middle East and North Africa the book links the production of alternative epistemologies to the notion of global cooperation and reassesses the ways in which the concept of connectedness can be applied at the translocal and individual rather than the formal international and collective level Knowledge Production Area Studies and Global Cooperation provides an innovative and critical approach towards established means of producing knowledge about different areas of the world demonstrating that an understanding of pluri local connectivity should be integrated into the production of knowledge about different areas of the world and the behavioural dimension of global cooperation By shifting the view from the collective to the individual and from the formal to often invisible patterns of connectedness this book provides an important fresh perspective which will be of interest to scholars and students of Area Studies Politics International Relations and Development Studies *Encyclopedia of Philosophy* Donald M. McKnight, 1992 In this important interdisciplinary study Stephen A McKnight brings together such prominent scholars as Allen Debus B J T Dobbs Klaus Vondung David Walsh and Wilbur Applebaum to discuss a major development in cultural political and scientific history a new understanding of the role of magic alchemy and other esoteric traditions in the evolution of early modern thought Twentieth century historians of science have labeled these traditions pseudo science In the early modern period however they were treasured by many philosophers theologians and scientists as the prisca theologia revelations by God to the great wise men of the ancient Near

East and Mediterranean including Hermes Trismegistus Zoroaster Moses Pythagoras and Plato Recent research has shown that these materials were earnestly studied by Ficino Pico Agrippa Bruno Campanella and Bacon Even the great patriarch of the Scientific Revolution Isaac Newton employed alchemical and theological elements in his work Science Pseudo Science and Utopianism in Early Modern Thought shows that pseudo science especially magic and alchemy was a crucial part of the theories and experiments that produced the scientific advances of the sixteenth and seventeenth centuries In addition it shows that these traditions have a strong utopian component depicting man as a terrestrial god capable of mastering nature and perfecting society In the early modern period this utopian theme became intertwined with the enthusiasm for scientific progress to produce the distinctly modern dream of social perfection through science Scholars and students of history philosophy political science and theology will find this a provocative addition to our understanding of the modern world
