Modern Movements In Architecture:

Modern Movements in Architecture Charles Jencks, 1985 See Camp and Johnson Philip in index Modern Movements in Architecture, 1985 History of Modern Architecture Leonardo Benevolo, 1977 *Modern Architecture* Frank Lloyd Wright, 2021-07-13 Frank Lloyd Wright's classic account of his vision for an organic architecture in a beautifully designed new edition *Modern Architecture* is a landmark text the first book in which America's greatest architect put forth the principles of a fundamentally new organic architecture that would reject the trappings of historical styles while avoiding the geometric abstraction of the machine aesthetic advocated by contemporary European modernists One of the most important documents in the development of modern architecture and the career of Frank Lloyd Wright *Modern Architecture* is a provocative and profound polemic against America's architectural eclecticism commercial skyscrapers and misguided urban planning The book is also a work of savvy self promotion in which Wright not only advanced his own concept of an organic architecture but also framed it as having anticipated by decades and bettered what he saw as the reductive modernism of his European counterparts Based on the 1931 original for which Wright supplied the cover illustration this beautiful edition includes a new introduction that puts *Modern Architecture* in its broader architectural historical and intellectual context for the first time The subjects of these lively lectures from *Machinery Materials and Men* to *The Tyranny of the Skyscraper* and *The City* move from a general statement of the conditions of modern culture to particular applications in the fields of architecture and urbanism at ever broadening scales Wright's vision in *Modern Architecture* is ultimately to equate the truly modern with romanticism imagination beauty and nature all of which he connects with an underlying sense of American democratic freedom and individualism The New Eco-Architecture: Alternatives from the Modern Movement Colin Porteous, 2013-10-11 *The New Eco Architecture* builds a historical bridge between architectural science and design It seeks to address neglected aspects of the Modern Movement as a prelude to supporting a diversity of architectural insight and experimentation aimed at twenty first century environmental needs and priorities The attitudes and influences of renowned figures are re examined in relation to current issues of architectural sustainability By setting today's green architectural quest within a twentieth century context and evaluating the main protagonists with regard to a modern eco sensitive lineage the book will be of primary interest to architectural students academics and practitioners However it should also intrigue historians theoreticians and critics who tend to gloss over such issues as well as other disciplines engaged with the built environment **Modern Architecture** Alan Colquhoun, 2002-04-25 This new account of international modernism explores the complex motivations behind this revolutionary movement and assesses its triumphs and failures The work of the main architects of the movement such as Frank Lloyd Wright Adolf Loos Le Corbusier and Mies van der Rohe is re examined shedding new light on their roles as acknowledged masters Alan Colquhoun explores the evolution of the movement from Art Nouveau in the 1890s to the megastructures of the 1960s revealing the often contradictory demands of form function social

against the larger context it is set in The key notion of the book is that architecture is space carved out of and against the context and that this process is deterministic *An Architecture of Immanence* Mark A. Torgerson, 2007-01-22 Torgerson begins by discussing God's transcendence and immanence and showing how church architecture has traditionally interpreted these key concepts He then traces the theological roots of immanence's priority from liberal theology and liturgical innovation to modern architecture Next Torgerson illustrates this new architecture of immanence through particular practitioners focusing especially on the work of theologically savvy architect Edward Anders Svik Finally he addresses the future of church architecture as congregations are buffeted by the twin forces of liturgical change and postmodernism

History of Modern Architecture Leonardo Benevolo, 1977 A serious and original study of the beginnings and

development of modernism in which the pictorial aspects are designed to aid in the communication of the author's closely reasoned formulations. Let it be said at once that the format of this work is richly handsome; it is a two-volume boxed set comprising 844 pages and well over 1,000 high-quality illustrations, and it reflects throughout its publisher's conviction that good design is an essential, not superficial, part of bookmaking. Beyond that, it should be emphasized that this work is not another facile cultural tour of modern architecture. It is a serious and original study of the beginnings and development of modernism in which the pictorial aspects are designed to aid in the communication of the author's closely reasoned formulations rather than to gloss over a lack of substantive content. The book is a translation of the third Italian edition published in 1966. Benevolo, who is on the faculty of architecture in Venice, has earned an international reputation as a historian of architecture and town planning, and his publications embrace the span of time from the Renaissance to the foreseeable future. One such publication, *The Origins of Modern Town Planning* (The MIT Press, 1967), may be read as a prelude to the present work as well as an independent contribution. Perhaps more than any other architectural historian in our time, Benevolo has made a determined effort to place developments in design and planning in their proper social and political settings. Indeed, the author argues that the development of the modern movement in architecture was determined not by aesthetic formalisms but largely by the social changes that have occurred since about 1760. After the middle of the eighteenth century, without the continuity of formal activity being in any way broken, indeed while architectural language seems to be acquiring a particular coherence, the relations between architect and society began to change radically. New material and spiritual needs, new ideas and modes of procedure arise both within and beyond the traditional limits, and finally they run together to form a new architectural synthesis that is completely different from the old one. In this way, it is possible to explain the birth of modern architecture, which otherwise would seem completely incomprehensible. This second volume is concerned with the modern movement proper from 1914 to 1966. The author emphasizes the unity of the movement, rejecting the usual treatment that allots to the individual architects separate and unconnected biographical accounts. Benevolo remarks at one point: "When one talks about modern architecture, one must bear in mind the fact that it implies not only a new range of forms but also a new way of thinking whose consequences have not yet all been calculated." His main concern is to provide a more exact calculation of those consequences.

The CIAM Discourse on Urbanism, 1928-1960 Eric Paul Mumford, 2002. The first history of the *Congrès Internationaux d'Architecture Moderne* traces the development and promotion of its influential concept of the Functional City.
