Modern Approaches To Endometriosis:

Modern Approaches to Endometriosis Eric J. Thomas, J. Rock, 2012-12-06 Endometriosis provides a unique clinical and scientific challenge. It is being diagnosed with increasing frequency and yet we are unsure of the significance of this in many patients. Its appearance varies from a tiny focus of disease to a potentially destructive phenomenon. We are still unsure of the relative value of medical or surgical treatment. The pathogenesis and control of the cellular function of the disease provide many scientific problems. The presence of a comparative normal epithelium, namely endometrium, provides a unique research opportunity. It is probable that only through basic science research will we be able to solve the clinical dilemmas that endometriosis presents. We felt that it was important to create a book that explored the important scientific and clinical problems. We therefore invited acknowledged experts from both Europe and the United States of America to review their fields. The purpose of these reviews is not only to provide a resource for clinicians and scientists but also to stimulate thought and new ideas for research and treatment. To fulfil that aim, we have asked that the authors be more speculative than normal for a volume such as this. We thank them for responding to their task so well and hope that you will feel as stimulated by their efforts as we have been.

Reversibility of Chronic Degenerative Disease and Hypersensitivity, Volume 1 William J. Rea, Kalpana Patel, 2010-06-18 The clinical approaches to the chronic degenerative diseases that drain our resources and compromise our well-being have become almost exclusively symptom-focused. The common wisdom is that they are idiopathic with final outcomes to be managed rather than prevented or cured. That they are potentially reversible rarely enters into any discussion.

Myc as a Disease Target Beyond Cancer Jonathan R. Whitfield, Mariano F. Zacarias-Fluck, John Sedivy, Yulia A. Nevzorova, 2024-09-02 Myc is a pleiotropic transcription factor fundamental for many cellular processes. It is an infamous and highly studied oncogene with around 10 000 articles published in the last decade. The majority of these link it to cancer. The focus on Myc as a hot target in cancer has led to immense efforts from academia through to pharmaceutical companies being directed towards finding a Myc inhibitor. Not surprisingly given its fundamental

nature in many physiological processes Myc has also been linked to a large variety of pathologies other than cancer The growing efforts to develop Myc inhibitors as cancer therapies will have important implications for the treatment of these diseases too whether they have a clearly demonstrated aetiology linked with Myc or so far are only at early stages of association with it Interestingly the activation of Myc may also prove helpful in the field of regenerative medicine and reversal of ageing The aim of this Research Topic is therefore to describe non oncological pathologies and conditions to which Myc modulation could be applied These will include conditions that have strong links to Myc and where Myc modulation has already been modelled as well as conditions that so far have more limited data linking them to Myc but where it seems to have a key role Authors will be expected to briefly review the particular disease and what is known to link Myc to it plus the possibility of any clinical trials in the near future
