## **Modern Astrophysics Memorial To O Struve:**

Color and Light in Nature David K. Lynch, William Charles Livingston, 2001-06-11 We live in a world of optical marvels from the commonplace but beautiful rainbow to the rare and eerie superior mirage But how many of us really understand how a rainbow is formed why the setting sun is red and flattened or even why the sky at night is not absolutely black This beautiful and informative guide provides clear explanations to all naturally occurring optical phenomena seen with the naked eye including shadows halos water optics mirages and a host of other spectacles Separating myth from reality it outlines the basic principles involved and supports them with many figures and references A wealth of rare and spectacular photographs many in full color illustrate the phenomena throughout In this new edition of the highly acclaimed guide to seeing photographing and understanding nature's optical delights the authors have added over 50 new images and provided new material on experiments you can try yourself

**Abundance Effects in Classification** B. Hauck, P.C. Keenan, 1976-09-30 The general discussions of the roles of photometric and spectroscopic classification at Cordoba in 1971 IAU Symposium No 50 and of the calibration of classification indices at Geneva in 1972 IAU Symposium No 54 revealed clearly the steadily increasing importance of abundance parameters The multiplicity of these however raised so many new problems that it was logical that the 1975 meeting at Lausanne should be concerned with ways in which differences in abundance affect both spectral types and photometric indices Commissions 29 and 36 joined with Commission 45 in sponsoring this Symposium Since the date of the meeting came shortly after the formal retirement of Professor William W Morgan from the University of Chicago it was quickly agreed that this meeting should be dedicated to him in recognition of his unique contributions to spectral classification In the opening paper of the Symposium Dr Bengt Stromgren has summarized these To his remarks we should add only that it was about 1940 that Morgan first distinguished the group of G and K type stars with weak CN bands and metallic lines stars which have since been recognized as having the abundance of all metals relative to hydrogen much lower than in stars of the solar population Spectra of two of these HD 81192 Boss 2527 and 8 Lep were later shown as examples of the group in the Yerkes Atlas of 1943

**The History of Modern Astronomy in Japan** Tomokazu Kogure, 2021-03-29 This book considers the history of modern

astronomy and astrophysics in Japan by comparing with the development of astrophysics in western countries Astrophysics essentially arose in three separate fields astronomical spectroscopy stellar structure and survey of celestial objects This book introduces readers to the state of astronomy back to the Tokugawa era 18th 19th centuries when the chief task of astronomers was limited to the calendar making With the so called Meiji revolution 1868 the situation drastically changed The Meiji Government promoted the modernization of Japan by hiring numbers of foreign instructors in political social and cultural affairs including Construction of Observatory and University Then the foreign studies of Japanese researchers lasted for many years After the Second World War Japan experienced great social and economical growth allowing the constructions of large optical radio and space instruments With this background astrophysics progressed and eventually flourished The book ends by highlighting Japanese contributions to international collaboration up to the early 21st century Readers of this book will understand how astrophysics has grown into one of the major sciences in Japan and how the works of individual astronomers are contributing to the global advancement of knowledge of the universe
