**Modern Biology; Its Conceptual Foundations** Elof Axel Carlson, 1967 *Modern Biology; Its Conceptual Foundations* Elof Axel Carlson, 1967 **The Scientific 100** John Simmons, Lynda Simmons, 2000-09-01 Who are the great scientists throughout the ages and what exactly did they do to earn their importance From Archimedes to Newton to Einstein to Hawking The Scientific 100 provides the fascinating answers Vivid biographical sketches chronicle the lives and accomplishments of the world's preeminent scientists And in the tradition of the Citadel Press 100 Series they are ranked provocatively in order of influence an inspiration for lively discussion This unique volume is a browser's treasure trove and a handy reference for the general reader John Simmons has been associated with Current Biography for more than fifteen years He has written frequently about Nobel laureates in science A member of the New York Academy of Sciences he divides his time between New York City and Paris **Mind in Life** Evan Thompson, 2010-09-30 Thompson explores the explanatory gap between biological life and consciousness drawing on sources as diverse as molecular biology evolutionary theory artificial life complex systems theory neuroscience psychology Continental Phenomenology and analytic philosophy to show that mind and life are more continuous than previously accepted **A Conceptual History of Modern Embryology** Scott F. Gilbert, 2013-11-11 Glory to the science of embryology So Johannes Holtfreter closed his letter to this editor when he granted permission to publish his article in this volume And glory there is glory in the phenomenon of animals developing their complex morphologies from fertilized eggs and glory in the efforts of a relatively small group of scientists to understand these wonderful events Embryology is unique among the biological disciplines for it denies the hegemony of the adult and sees value indeed more value in the stages that lead up to the fully developed organism It seeks the origin and not merely the maintenance of the body And if embryology is the study of the embryo as seen over time the history of embryology is a second order derivative seeing how the study of embryos changes over time As Jane Oppenheimer pointed out Science like life itself indeed like history itself is a historical phenomenon It can build itself only out of its past Thus there are several ways in which embryology and the history of embryology are similar Each takes a current stage of a developing entity and seeks to explain the paths that brought it to its present condition Indeed embryology used to be called *Entwicklungsgeschichte* the developmental history of the organism Both embryology and its history interpret the interplay between internal factors and external agents in the causation of new processes and events **Topics in the Philosophy of Biology** Marjorie Grene, Everett Mendelson, 2012-12-06 The philosophy of biology should move to the center of the philosophy of science a place it has not been accorded since the time of Mach Physics was the paradigm of science and its shadow falls across contemporary philosophy of biology as well in a variety of contexts reduction organization and system biochemical mechanism and the models of law and explanation which derive from the Duhem Popper Hempel tradition This volume we think offers ample evidence of how good contemporary work in the philosophical understanding of biology has become

Marjorie Grene and Everett Mendelsohn aptly combine a deep philosophical appreciation of conceptual issues in biology with an historical understanding of the radical changes in the science of biology since the 19th century. In this book they present essays which probe such historical and methodological questions as reducibility, levels of organization, function and teleology, and the range of issues emerging from evolutionary theory and the species problem. In conjunction with Professor Grene's collection of essays on the philosophy of biology, *The Understanding of Nature* (Boston Studies in the Philosophy of Science Vol XXIII) and the occasional essays on these topics which we have published in other volumes listed below, this volume contributes to bringing biology to the center of philosophical attention.

Everett Mendelsohn, *Explanation in Nineteenth Century Biology* (Boston Studies Vol II, 1965); David Hawkins, *Taxonomy and Information* (Boston Studies Vol III, 1967).

*True Materialism* Jensen Suther, 2025-09-16. In recent years there has been an explosion of interest in both Marxism and German Idealism across the humanities, but the discourse around the two traditions has grown stagnant and is still defined by the same century-old debates: materialism versus idealism, history versus logic, revolution versus reform. With this exciting new work, Jensen Suther endeavors to transform this discourse by presenting an unprecedented systematic vision of the possibility of a Hegelian Marxism grounded in Aristotle's logic of living form. Through engagement with three titans of literary modernism—Franz Kafka, Thomas Mann, and Samuel Beckett—Suther pursues not only an account of Hegel's materialism but also a new critique of capitalist modernity. Breaking with the received view of Marx's relation to German Idealism, the book argues that the materialist critique of capitalist production is inseparable from Hegel's idea that the demand for freedom is a demand for mutual recognition. The implication for Marxist criticism is that literary works cannot be understood apart from the political struggle for both recognition and new forms of social production. Anyone invested in socialist politics, the future of literary theory, the history of philosophy, and the study of modernism will want to contend with the way Suther rethinks Marxist theory and literary criticism from the ground up, starting with their foundations in Hegelian thought.

**Levels of Organization in the Biological Sciences** Daniel S. Brooks, James DiFrisco, William C. Wimsatt, 2021-08-24. Scientific philosophers examine the nature and significance of levels of organization, a core structural principle in the biological sciences. This volume examines the idea of levels of organization as a distinct object of investigation, considering its merits as a core organizational principle for the scientific image of the natural world. It approaches levels of organization roughly the idea that the natural world is segregated into part-whole relationships of increasing spatiotemporal scale and complexity in terms of its roles in scientific reasoning as a dynamic, open-ended idea capable of performing multiple overlapping functions in distinct empirical settings. The contributors, scientific philosophers with longstanding ties to the biological sciences, discuss topics including the philosophical and scientific contexts for an inquiry into levels, whether the concept can actually deliver on its organizational promises, the role of levels in the development and evolution of complex systems, conditional independence and downward causation, and the extension of the concept into the sociocultural realm.

Taken together the contributions embrace the diverse usages of the term as aspects of the big picture of levels of organization Contributors Jan Baedke Robert W Batterman Daniel S Brooks James DiFrisco Markus I Eronen Carl Gillett Sara Green James Griesemer Alan C Love Angela Potochnik Thomas Reydon Ilya T mkin Jon Umerez William C Wimsatt James Woodward **Philosophical Neuroethics: A Personalist Approach. Volume 1** James Beauregard,2019-08-02

Neuroethics is a theoretical and practical discipline that considers the many ethical issues that arise in neuroscience From its inception the field has sought to develop an ethical vision from within the confines of science a task that is both misguided and in the end impossible Providing a solid theoretical foundation for neuroethics means looking to other sources most specifically to philosophy In this groundbreaking work the author examines the current underpinnings of neuroethical thinking and finds them inadequate to the task of neuroethics to think ethically about persons technology and society Grounded in the physicalist and deterministic presuppositions of contemporary science and drawing on utilitarian thought neuroethics as currently conceived lacks the ability to develop a robust and adequate notion of persons and of ethics Philosophical Neuroethics examines the historical reasons for this state of affairs for the purpose of proposing a more viable alternative drawing on the tradition of personalism for a more adequate metaphysical epistemological anthropological and ethical vision of the human person and of ethics that can serve as a solid foundation for the theory and practice of neuroethical decision making as it touches on the neurologic and psychiatric care of individuals our philosophy of technology and the social implications of neuroscience that touch on public policy neurotechnology the justice system and the military Drawing on the personalist philosophical tradition that emerged in the twentieth century in the works of Mounier Maritain Guardini Wojtyla and the Modern Ontological Personalism of Juan Manuel Burgos Philosophical Neuroethics brings to light the limitations of contemporary neuroethical thinking and sets forth a comprehensive vision of the human person capable of interacting with the contemporary questions raised by neuroscience and technology *Multicellularity* Karl J. Niklas,Stuart A. Newman,2022-06-07 Scholars consider the origins and consequences of the evolution of multicellularity addressing a range of organisms experimental protocols theoretical concepts and philosophical issues The evolution of multicellularity raises questions regarding genomic and developmental commonalities and discordances selective advantages and disadvantages physical determinants of development and the origins of morphological novelties It also represents a change in the definition of individuality because a new organism emerges from interactions among single cells This volume considers these and other questions with contributions that explore the origins and consequences of the evolution of multicellularity addressing a range of topics organisms and experimental protocols Each section focuses on selected topics or particular lineages that present a significant insight or challenge The contributors consider the fossil record of the paleontological circumstances in which animal multicellularity evolved cooptation recurrent patterns modularity and plausible pathways for multicellular evolution in plants theoretical approaches to the amoebzoa and fungi cellular slime molds having long

**A Metaphysics for Scientific Realism** Anjan Chakravartty, 2007-10-18 Scientific realism is the view that our best scientific theories give approximately true descriptions of both observable and unobservable aspects of a mind independent world Debates between realists and their critics are at the very heart of the philosophy of science Anjan Chakravartty traces the contemporary evolution of realism by examining the most promising strategies adopted by its proponents in response to the forceful challenges of antirealist sceptics resulting in a positive proposal for scientific realism today He examines the core principles of the realist position and sheds light on topics including the varieties of metaphysical commitment required and the nature of the conflict between realism and its empiricist rivals By illuminating the connections between realist interpretations of scientific knowledge and the metaphysical foundations supporting them his book offers a compelling vision of how realism can provide an internally consistent and coherent account of scientific knowledge

**Evolution: Genesis and Revelations** C. Leon Harris, 1981-06-30 In this comprehensive history of evolutionism C Leon Harris has combined primary source readings with clear pertinent background information to provide a solid basic understanding of the ways scientists have arrived at today's views of evolution Harris describes the major contributors to the theory of evolutionism placing each in the context of the general cultural influences to which he was exposed Each chapter also contains an explanation of the philosophical basis of the scientific approach of the period in question A lengthy bibliography provides direction for further reading on this important and timely subject

**Evolution "On Purpose"** Peter A. Corning, Stuart A. Kauffman, Denis Noble, James A. Shapiro, Richard I. Vane-Wright, 2023-08-22 A unique exploration of teleonomy also known as evolved purposiveness as a major influence in evolution by a broad range of specialists in biology and the philosophy of science The evolved purposiveness of living systems termed teleonomy by chronobiologist Colin Pittendrigh has been both a major outcome and causal factor in the history of life on Earth Many theorists have appreciated this over the years going back to Lamarck and even Darwin in the nineteenth century In the mid twentieth century however the complex dynamic process of evolution was simplified into the one way bottom up single gene centered paradigm widely known as the modern synthesis In *Evolution On Purpose* edited by Peter A Corning Stuart A Kauffman Denis Noble James A Shapiro Richard I Vane Wright and Addy Pross some twenty theorists attempt to modify this reductive approach by exploring in depth the different ways in which living systems have themselves shaped the course of evolution *Evolution On Purpose*

**Encyclopedia of Evolution** Stanley A. Rice, 2009 Evolutionary science is not only one of the greatest breakthroughs of modern science but also one of the most controversial Perhaps more than any other scientific area evolutionary science has caused us all to question what we are where we came from and how we relate to the rest of the universe Encyclopedia of Evolution contains more than 200 entries that span modern evolutionary science and the history of its development This comprehensive volume clarifies many common misconceptions about evolution For example many people have grown up being told that the fossil record does not demonstrate an evolutionary pattern and that there are many missing links In fact most of these missing links have been found and their modern representatives are often still alive today The biographical entries represent evolutionary scientists within the United States who have had and continue to have a major impact on the broad outline of evolutionary science The biographies chosen reflect the viewpoints of scientists working within the United States Five essays that explore interesting questions resulting from studies in evolutionary science are included as well The appendix consists of a summary of Charles Darwin's Origin of Species which is widely considered to be the foundational work of evolutionary science and one of the most important books in human history The five essays include How much do genes control human behavior What are the

ghosts of evolution Can an evolutionary scientist be religious Why do humans die Are humans alone in the universe      *The Romantic Conception of Life* Robert J. Richards, 2002-12 All art should become science and all science art poetry and philosophy should be made one Friedrich Schlegel's words perfectly capture the project of the German Romantics who believed that the aesthetic approaches of art and literature could reveal patterns and meaning in nature that couldn't be uncovered through rationalistic philosophy and science alone In this wide ranging work Robert J Richards shows how the Romantic conception of the world influenced and was influenced by both the lives of the people who held it and the development of nineteenth century science Integrating Romantic literature science and philosophy with an intimate knowledge of the individuals involved from Goethe and the brothers Schlegel to Humboldt and Friedrich and Caroline Schelling Richards demonstrates how their tempestuous lives shaped their ideas as profoundly as their intellectual and cultural heritage He focuses especially on how Romantic concepts of the self as well as aesthetic and moral considerations all tempered by personal relationships altered scientific representations of nature Although historians have long considered Romanticism at best a minor tributary to scientific thought Richards moves it to the center of the main currents of nineteenth century biology culminating in the conception of nature that underlies Darwin's evolutionary theory Uniting the personal and poetic aspects of philosophy and science in a way that the German Romantics themselves would have honored *The Romantic Conception of Life* alters how we look at Romanticism and nineteenth century biology      *Catalog of Copyright Entries. Third Series* Library of Congress. Copyright Office, 1970      *Choosing Selection* Stephen G. Brush, 2009 Describes the hypothesis that Darwin's natural selection reformulated by R A Fisher J B S Haldane and S Wright in the light of Mendelian genetics is the exclusive mechanism for biological evolution During the 1930s alternatives such as Lamarckism macromutations and orthogenesis were rejected in favor of natural selection acting on small mutations but there were disagreements about the role of random genetic drift in evolution By the 1950s research by T Dobzhansky E B Ford and others persuaded leading evolutionists that natural selection was so powerful that drift was unimportant This conclusion was accepted by most however some biology textbooks and popular articles mentioned drift in the late 1960s      *The Book Buyer's Guide* , 1967
