Prof. Dr. Bilal Semih Bozdemir, 2 Density The density of soil and rock materials is essential in understanding their load bearing capabilities Bulk density is defined as the mass of the soil or rock per unit volume which includes both the solid particles and the void spaces between them Specific gravity on the other hand is a measure of density relative to the density of water and reflects the inherent material properties The relationship between moisture content and density is particularly significant As water content increases the density of the material changes impacting its engineering behavior Saturated soils will exhibit different properties compared to dry soils highlighting the importance of considering environmental conditions in classification 3 Moisture Content Moisture content is the amount of water contained in the soil or rock expressed as a percentage of the dry mass It is a critical factor influencing the behavior of both soils and rocks In soils moisture affects weight cohesion and plasticity The Atterberg limits critical for classifying fine grained soils define the boundaries of moisture content for various states liquid plastic and shrinkage In rocks moisture plays a vital role in weathering processes and can impact the rock s strength and durability Saturated conditions may lead to changes in pore pressure potentially causing instability especially in cases where excavation or grading is being performed **Negotiating Digital Heritage**

Infrastructures Quoc-Tan Tran,2025-09-18 Negotiating Digital Heritage Infrastructures examines the infrastructural qualities of museum work that influence the ability of cultural institutions to support participatory and socially inclusive missions Drawing on data gathered in Scotland Sweden and Germany and taking an infrastructure studies approach the book focuses on the socio technical negotiations underpinning the everyday practices of museum staff The book examines the work that is done behind the scenes including the everyday tasks of collecting archiving displaying museum objects and retrieving information Tran argues that while the technical components of infrastructure are necessary for memory making and knowledge production it is the social part of museum infrastructure that enables more open and decentralised modes of

memory making The book shows how these negotiations affect the ability of museum infrastructures to accommodate and support growth and development expanding access and establishing modes of connection to external partners and services It illuminates the less visible practices of museums which nevertheless directly affect their more public outward facing activities Negotiating Digital Heritage Infrastructures will be of interest to academics and students who are engaged in the study of museums and heritage It will be particularly useful to those with an interest in public participation social inclusion heritage management the digitisation of collections data aggregation and human centred design approaches
