PRESS INC NEW YORK PREFACE Orcharding and small fruit culture represent a major phase of American agriculture both
domestic and export With the intensified development of the industry the science of horticulture becomes more complex and
the professional horticulturist the student and the grower all feel the need of additional training and a ready source of recent
research Not only the American but also the foreign literature is increasing rapidly and every branch of study demands
consideration The student of fruit culture whether in or outside college should have a grasp of general concepts He should
strive to interpret physiology morphology soils chemistry and other fundamental sciences in terms of fruit plants and their
products The authors hope that they have presented the fundamentals in such a way that they become of vital concern to the
serious student At the same time they have endeavored to present the most acceptable practices of American fruitgrowing
Pomology has developed into a science in its own right similar in its fundamental background to other plant sciences The
horticulturist must always remember however that he is the representative of a vast industry and that his scientific efforts
and leadership must be based on practical considerations No effort is made therefore to force scientific data into this text
except as they form a basis for modern fruit production The general subject of insect and disease control has not been
included in this volume The field is so extensive and specialized as to lie outside our immediate purposes hence only
incidental reference is made to sprays and spray practice The present volume represents a complete rewriting and expansion
of the Text Book of Pomology While a few portions of it remain much the same as they were in the original text by far the
major portion of material is entirely new both as to American and foreign sources Acknowledgments The authors
of this work have drawn freely upon the published material of their associates in the general plant field Although no attempt
or pretention has been made to cite all acceptable literature dealing with a subject yet the authors have endeavored to select
such representative experiments and data as would assist the reader to a better understanding of the problem Fellow
workers have been most helpful either in reading portions of the text or in offering suggestions through correspondence and
also in furnishing illustrative material Our sincere appreciation is hereby expressed We are particularly indebted to Dr J R
Magness for a critical and helpful reading of the entire manuscript Special assistance and courtesies have been extended by
