Agent-Based Manufacturing and Control Systems Massimo Paolucci, Roberto Sacile, 2004-10-28 Traditional manufacturing systems rely upon centralized hierarchical systems that are not responsive enough to the increasing demand for mass customization Decentralized or heterarchical management systems using autonomous agents promise to nullify the limitations of previous solutions Agent Based Manufacturing and Control Systems New Re-engineering the Enterprise J. Browne, David O'Sullivan, 2013-06-05 Business process re engineering tools offer techniques to model the enterprise and identify opportunities to make change This book examines the approaches tools and techniques which support redesign of the enterprise to achieve world class performance *Management and Control of Production and Logistics 2004 (MCPL 2004)* Gaston Lefranc, 2006-01-30 *New Developments in Robotics Research* John X. Liu, 2005 Robotics began as a science fiction creation which has become quite real first in assembly line operations such as automobile manufacturing aeroplane construction etc They have now reached such areas as the Internet ever multiplying medical uses and sophisticated military applications Control of today's robots is often remote which requires even more advanced computer vision capabilities as well as sensors and interface techniques Learning has become crucial for modern robotic systems as well This new book brings together leading research in this exciting field **Cooperative Knowledge Processing for Engineering Design** Arthur B. Baskin, George L. Kovacs, Gianni Jacucci, 2013-06-29 Cooperative working environments and their development are becoming increasingly important and ever more frequent in different industrial sectors and this book provides a scientific approach for managing Team Engineering Meta cognitive knowledge and networks are identified as the key resources

enabling engineering teams to work effectively and to reduce engineering time and this book illustrates how computer support can aid cooperative work within the context of practical methodologies and examples The fields covered in the book include State of the art research in cooperative learning tools Practical examples and methodologies illustrating the implementation of cooperative networks and An interdisciplinary approach to team engineering This valuable new book is sponsored by the International Federation for Information Processing IFIP and will be essential reading for researchers engineers technical managers involved in the development of advanced applications for engineering and manufacturing and software design and engineering

Computer-Assisted Management and Control of Manufacturing Systems Spyros G. Tzafestas, 2012-12-06 Modern manufacturing systems involve many processes and operations that can be monitored and controlled at several levels of intelligence At the highest level there is a computer that supervises the various manufacturing functions whereas at the lowest level there are stand alone computer controlled systems of manufacturing processes and robotic cells Until recently computer aided manufacturing systems constituted isolated islands of automation each oriented to a particular application but present day systems offer integrated approaches to manufacturing and enterprise operations These modern systems known as computer integrated manufacturing CIM systems can easily meet the current performance and manufacturing competitiveness requirements under strong environmental changes CIM systems are much of a challenge and imply a systemic approach to the design and operation of a manufacturing enterprise Actually a CIM system must take into account in a unified way the following three views the user view the technology view and the enterprise view This means that CIM includes both the engineering and enterprise planning and control activities as well as the information flow activities across all the stages of the system
