Gordon, 2022-12-30 New technologies and medicines make it increasingly possible to enhance human functioning in new ways to become smarter more emotionally attuned and perhaps even morally better But just because we can use the latest science to improve ourselves should we This book has two main aims First it outlines and criticises the six main contemporary arguments for scepticism about the role of human enhancements in promoting well being These arguments concern respectively i the value of achievements ii freedom iii hyperagency iv human nature v authenticity and vi inequality It will be shown for the first time in a book length treatment why the overarching bioconservative case against enhancement doesn't hold water The second central aim of the book is positive as we'll see each of the bioconservative critiques considered and rejected will be shown to nonetheless motivate a distinctive kind of

theoretical desideratum that a viable positive enhancement proposal should satisfy The remainder of the book then defends a two part enhancement proposal that will be shown to clearly satisfy the theoretical desiderata that emerged from reflecting on the earlier critique of bioconservativism The first part of the positive proposal motivates and outlines the general role of an enhancement counsellor in facilitating voluntary enhancement I then offer an applied case study of this role in the special case of enhancement for the purpose of facilitating romantic and parental relationships Human Enhancement and Well Being A Case for Optimism will be of interest to scholars and advanced students working in applied ethics bioethics philosophy of technology philosophy of well being and social epistemology *Community Psychology and Community Mental Health*
