Pressures & Temperatures Oscar Moran, 2021-01-17 This book concentrates on air conditioning equipment that contains R22 R407C and R410A some of this information can be used to work on other refrigerants like subcooling superheat and temperature difference The explanations are made in simple terms which allows the reader to gain understanding and knowledge of an air conditioner Remember pressures and temperatures are examples of measurements taken from air conditioners These measurements are pretty close to what you should get on an air conditioner during normal operation measurements that you can use as a guide The refrigerant gas inside the air conditioner does not get wasted it only circulates throughout the system If it does not cool that does not mean that the refrigerant has leaked out it could be something else Production of R22 refrigerant has decline since 2010 meaning that the companies will no longer produce R22 refrigerant in the near future However new refrigerants have come out since then on this book we are going to mention two new refrigerants 407C and 410A these new refrigerants are not a drop in they can only be installed with new air conditioning equipment but some information can be used for other refrigerants
