**The Race Bomb** Paul R. Ehrlich, S. Shirley Feldman, 1978      **The Race for the Atomic Bomb** Norman Ridley, 2023-04-06

On 19 December 1938 Otto Hahn working at the Kaiser Wilhelm Institute for Chemistry in Berlin conducted an experiment the results of which baffled him It took his migr collaborator Lise Meitner to explain that he had split an atom of uranium which at the time seemed to defy all known laws of physics When Neils Bohr took this news to the United States it became clear to scientists there that these results opened a completely new and for some horrifying possibility of energy production that could be used for both peaceful and military purposes Scientists in Germany France Britain and the US began to delve deeper into the implications But it was the British government that was the first to explicitly describe how the splitting of the atom might be utilized to create a practical weapon of fearsome power France by then had been occupied by the Germans and most of their nuclear scientists had fled to Britain For their part the Germans who for a time were at the very forefront of nuclear research had weakened their own scientific ranks by hounding many of their best scientists who had fled persecution under the draconian Nazi racial laws They still retained however possibly the ablest nuclear scientist of them all in Werner Heisenberg who set about developing his own program for nuclear power British scientists made extensive progress before realizing that translating their laboratory results into the vast industrial enterprise required to build a bomb was way beyond the nation s stretched resources The government agreed to hand over all the UK s research findings to America in return for a share of the spoils The United States for its part was impressed with British results and invested enormous sums of money and resources into what became known as the Manhattan Project in a concerted effort to build a bomb before the end of the war For much of the war the Soviets showed little enthusiasm for the sort of investment required to build their own bomb However with an eye to the future they established an extensive espionage network both in Britain and America Following the German surrender there was still the problem of Japan and the race continued to develop a working bomb to accelerate the end of the war both to save Allied lives and to prevent Soviet expansion into northern China and the Japanese mainland It was a race that the Unites States won It was also a race that ushered in a new Cold War      **The Negro in Chicago** Chicago Commission on Race Relations, 1922      **The Race for the Atom Bomb** John Harte, 2023-09-30 Describes how Soviet Russia s leading spymasters in Moscow Center obtained information from British and American physicists to make an atomic bomb When Nazi Germany began a secret weapons program called The Uranium Club in April 1939 Stalin was alerted by his American and British spies of the possibility that German scientists were working to develop an atomic bomb The British Government and the United States and Stalin realized that if Hitler used The Atom Bomb it could mean the end of the West or the end of the world John Harte s new book about The Manhattan Project describes how Soviet Russia s leading spymasters in Moscow Center obtained information from British and American physicists to make a Soviet atomic bomb at each and every stage when the American bomb was developed at Los Alamos in New Mexico      *A Global History of the*

*The Jet Race and the Second World War* S. Mike Pavelec, 2007-02-28 In the 1930s as nations braced for war the German military build up caught Britain and the United States off guard particularly in aviation technology The unending quest for speed resulted in the need for radical alternatives to piston engines In Germany Dr Hans von Ohain was the first to complete a flight worthy turbojet engine for aircraft It was installed in a Heinkel designed aircraft and the Germans began the jet age on August 27 1939 The Germans led the jet race throughout the war and were the first to produce jet aircraft for combat operations In England the doggedly determined Frank Whittle also developed a turbojet engine but without the support enjoyed by his German counterpart The British came second in the jet race when Whittle's engine powered the Gloster Pioneer on May 15 1941 The Whittle Gloster relationship continued and produced the only Allied combat jet aircraft during the war the Meteor which was relegated to Home Defense in Britain In America General Electric copied the Whittle designs and Bell Aircraft contracted to build the first American jet plane On October 1 1942 a lackluster performance from the Bell Airacomet ushered in the American jet age The Yanks forged ahead and had numerous engine and airframe programs in development by the end of the war But the Germans did it right and did it first while the Allies lagged throughout the war only rising to technological prominence on the ashes of the German defeat Pavelec's analysis of the jet race uncovers all the excitement in the high stakes race to develop effective jet engines for warfare and transport

speculated nuclear attack is often cast as a contest between races and ethnic groups Race Ethnicity and Nuclear War listens to voices from around the Anglophone world and the debates followed do not only take place on the soil of the nuclear powers Filmmakers and writers from the Caribbean Australia and India take up positions shaped by their specific place in the decolonizing world and their particular experience of nuclear weapons The texts considered in Race Ethnicity and Nuclear War encompass the many guises of representations of nuclear weapons the Manhattan Project that developed the first atomic weapons the destruction of Hiroshima and Nagasaki nuclear tests taking place around the world and the anxiety surrounding the superpowers devastating arsenals Of particular interest to SF scholars are the extensive analyses of films novels and short stories depicting nuclear war and its aftermath New thoughts are offered on the major texts that SF scholars often return to such as Philip Wylie's *Tomorrow* and Pat Frank's *Alas Babylon* and a host of little known and under researched texts are scrutinized too

*Beginnings of the Cold War Arms Race* Raymond Ojserkis, 2003-12-30 The Truman administration's decision to embark on an arms build up in 1950 was a critical event For the first time other than a World War the United States became a global military presence Unlike the World Wars in this instance the deployment lasted decades altering the nature of the Cold War and the United States global role Such a decision deserves a book dedicated to understanding the strategy and politics behind it The *Beginnings of the Cold War Arms Race* serves that purpose The *Beginnings of the Cold War Arms Race* reviews the state of American military affairs in the late 1940s and describes the role of atomic power in American strategy It also outlines the factional fighting within the Truman administration over military spending and deployments and considers the Truman administration's perceptions of Soviet military power and intentions The author presents a fascinating account of the strategy and politics behind the Truman administration's decision to engage in a massive arms build up that initiated the Cold War arms race

*Military Technology, Military Strategy and the Arms Race* Marek Thee, 2025-03-03 First published in 1986 *Military Technology Military Strategy and the Arms Race* argues that a principal factor contributing to the arms race is the military research and development R and D sector It traces the arms race since World War II and explores the relationship between the emergence of new weapon technology the development of new weapon systems and their impact on strategic thinking It considers the positions for both the United States and its allies in NATO and for the erstwhile Soviet Union It argues that military R and D which consumes an increasing proportion of total funds spent on R and D has developed a self sustaining technological momentum which is baked by a powerful military industrial bureaucratic technological complex and is increasingly out of control of political leaders The book argues that negotiations to limit the numbers of weapons fail to address the main problem and that more emphasis should be given to considering ways of limiting and controlling military R and D It concludes by proposing a radical shift in policy to achieve this This historical reference work is important for scholars and researchers of military studies defence studies international relations diplomacy and international politics

**Nuclear Race** Sebastian Farnham, AI, 2025-03-21 *Nuclear Race* explores

Russia's pivotal role in the nuclear arms race examining its evolution from the Soviet era to modern times and its lasting geopolitical impact. The book investigates the technological advancements of Soviet and Russian nuclear weapons programs, the strategic doctrines guiding their deployment, and the political maneuvers defining Russia's relationships with other nuclear powers. Did you know that the concept of mutually assured destruction (MAD) played a central role in shaping Cold War strategy, acting as a precarious deterrent against nuclear war? This book provides crucial historical context, beginning with the post-World War II environment that spurred the Soviet Union to develop its own atomic bomb. The book argues that Russia's nuclear policies, driven by security concerns, ideological imperatives, and great power ambitions, have significantly influenced global stability since 1945. It presents its analysis through a chronological and thematic exploration, starting with the scientific foundations of the Soviet program and moving into an analysis of strategic thinking and post-Soviet adaptation. The book culminates by assessing the implications of Russia's nuclear posture for contemporary global security. The book connects to political science, science and technology studies, and sociology, providing diverse perspectives on the subject.

**Motorcycle Race, Barstow, CA to Las Vegas, NV, 1974**      **The Arms Race and Nuclear Proliferation** Martin Gitlin, 2017-12-15. Following the bombings of Nagasaki and Hiroshima, the twentieth century was haunted by the specter of nuclear annihilation. Locked in a hostile embrace, the U.S. and the USSR engaged in a ruinous arms race, preparing for the kind of war no one wanted and no one could win. Though the Cold War ended, the dangers of nuclear proliferation remain, with poorly secured nuclear weapons and materials vulnerable to theft, sale, accident, or misuse. The many debates over the years surrounding the arms race, proliferation, deterrence, and security are collected here to provide readers with a fine-grained sense of the international tensions, political urgency, diplomatic strategies, and global fears that have long underlined the effort to build and maintain nuclear arsenals.

**Nuclear Arms Race** Sebastian Farnham, 2025-03-04. Nuclear Arms Race explores the complex history of nuclear weapons from their creation to their lasting impact on global politics. It argues that the nuclear arms race was more than just a military buildup; it was a product of political ideologies, scientific breakthroughs, and human error, shaping international relations even today. The book uniquely examines the psychological factors influencing decision-making during high-tension periods, offering a human-centered perspective. The book progresses by first introducing the science behind nuclear weapons and the ethical dilemmas faced by their creators. It then analyzes the Cold War arms race, including events like the Cuban Missile Crisis and the SALT talks. Finally, it addresses post-Cold War challenges like nuclear proliferation and terrorism, drawing on declassified documents, archival materials, and interviews with key figures. This approach provides a comprehensive understanding of nuclear weapons and their impact on the world.
