Innovative Energy Strategies for CO₂ Stabilization Robert G. Watts, 2002-07-11 The vast majority of the world's climate scientists believe that the build up of heat trapping CO₂ in the atmosphere will lead to global warming unless we burn less fossil fuels At the same time energy must be supplied in increasing amounts for the developing world to continue its growth This book discusses the feasibility of increasingly efficient energy use and the potential for supplying energy from sources that do not introduce CO₂ The book analyses the prospects for Earth based renewables solar wind biomass hydroelectricity geothermal and ocean energy It then discusses nuclear fission and fusion and the relatively new idea of harvesting solar energy on satellites or lunar bases It will be essential reading for all those interested in energy issues including engineers and physicists electrical mechanical chemical industrial environmental nuclear and industrial leaders and politicians It will also be used as a supplementary textbook on advanced courses on energy
