suggests that the approach will have as much of an impact on psychology in the field as it has had on psychology in the laboratory The chapters in this volume indicate the extent to which this potential has already begun to be realized The book is divided into four parts The first three parts include sets of research contributions followed by discussions and the fourth part contains three chapters that offer critiques syntheses and evaluations of various aspects of the preceding papers

*Mechanisms of Language Acquisition* Brian MacWhinney, 2014-02-04 First published in 1987 Three decades of intensive study of language development have led to an enormous accumulation of descriptive data But there is still no over arching theory of language development that can make orderly sense of this huge stockpile of observations Grand structuralist theories such as those of Chomsky Jakobson and Piaget have kept researchers asking the right questions but they seldom allow us to make detailed experimental predictions or to formulate detailed accounts The papers collected in this volume attempt to address this gap between data and theory by formulating a series of mechanistic accounts of the acquisition of language

*Machine Learning of Natural Language* David M.W. Powers, Christopher C.R. Turk, 2012-12-06 We met because we both share the same views of language Language is a living organism produced by neural mechanisms relating in large numbers as a society Language exists between minds as a way of communicating between them not as an autonomous process The logical rules seem to us an epiphenomena of the neural mechanism rather than an essential component in language This view of language has been advocated by an increasing number of workers as the view that language is simply a collection of logical rules has had less and less success People like Yorick Wilks have been able to show in paper after paper that almost any rule which can be devised can be shown to have exceptions The meaning does not lie in the rules David Powers is a teacher of computer science Christopher Turk like many workers who have come into the field of AI Artificial Intelligence was originally trained in literature He moved into linguistics and then into computational linguistics In 1983 he took a sabbatical in Roger Shank's AI project in the Computer Science Department at Yale University Like an earlier visitor to the project John Searle from California Christopher Turk was increasingly uneasy at the view of language which was used at Yale

**Readings in Machine Learning** Jude W. Shavlik, Thomas Glen Dietterich, 1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the editors
