**Reproductive Biology of Invertebrates, Accessory Sex Glands**, 1993-03-02 Reproductive Biology of Invertebrates Volume III Accessory Sex Glands Edited by K G Adiyodi Accessory Sex Glands is the third volume in the encyclopaedic series and provides very valuable information some hitherto unpublished on the distribution structure origin physiology biochemistry pharmacology and evolution of the accessory sex glands in different groups of invertebrates Volumes I and II of this series published by Wiley have given detailed accounts of the structure origin composition and physiology of female and male gametes and also provided some information on the mechanisms controlling their production The secretions of accessory sex glands are indispensable for several key aspects of gamete physiology and for successful fertilization and development in many internally fertilizing invertebrates Interestingly enough accessory sex gland secretions are produced in some species at least under the influence of gonadotrophic hormones as are the gametes themselves The data on invertebrate accessory sex glands are scattered in various journals and have not been so far collected critically evaluated and published in book form This volume thus fills a void and serves as an indispensable corollary and companion to the two volumes that have already appeared on gametology in the series Contents Series Preface Preface to Volume III Systematic Resume of the Invertebrates Platyhelminthes Turbellaria S S Guraya and V R Parshad Nemertina M Gontcharoff Gnathostomulida Marlene Mainitz Rotifera John J Gilbert Gastrotricha W D Hummon and M R Hummon Nematoda L A Fitzgerald and W Eugene Foor Acanthocephala David W T Crompton Mollusca N W Runham Annelida K G Adiyodi

Cell Signalling in Prokaryotes and Lower Metazoa I. Fairweather, 2013-11-11 Cell signalling lies at the heart of many biological processes and currently is the focus of intense research interest In multicellular organisms it is central to how different types of cell communicate with each other and how they detect and respond to extracellular signals Intercellular communication is vital to single celled organisms as well allowing them to respond to environmental cues and signals To date much of the understanding of signalling mechanisms has come from research on specific cell types eg mouse lymphocyte and cardiomyocyte or on organisms in which communication systems such as nervous and endocrine systems are well established This volume therefore aims to fill the gap by concentrating on simple organisms where the elements of those signalling systems first evolved Many of the groups covered contain important pathogens or parasites and the potential for manipulating signalling pathways for therapeutic intervention will be highlighted

Vitamins and Hormones , 2000-10-05 Under the capable and qualified editorial leadership of Dr Gerald Litwack Vitamins and Hormones continues to publish cutting edge reviews of interest to endocrinologists biochemists nutritionists pharmacologists cell biologists and molecular biologists First published in 1943 Vitamins and Hormones is the longest running serial published by Academic Press In the early days of the Serial the subjects of vitamins and hormones were quite distinct Now new discoveries have proved that several of the vitamins function as hormones and many of the substances inferred by the title of the serial function in signal transduction processes Accordingly the Editor in Chief has expanded the scope of the serial to reflect this newer understanding of function structure relationships in cellular communication The Editorial Board now reflects expertise in the field of hormone action vitamin action X ray crystal structure physiology and enzyme mechanisms This volume comprises three groups of contributors The first three papers deal with receptors and their actions The second group of three papers are on diabetes and specific hormones The last three papers are presentations on various aspects of vitamins and growth factors

Invertebrate Reproduction & Development , 2003

Reproduction and Development of Marine Invertebrates of the Northern Pacific Coast Megumi F. Strathmann, 2017-09-05 This reference work is designed to provide background information on an array of northeastern Pacific marine invertebrate species so that they can be more easily included in comparative studies of morphology cell biology reproduction embryology larval biology and ecology It is meant to serve biologists who are new to the field as well as experienced investigators who may not be familiar with the invertebrate fauna

of the northern Pacific Coast The species discussed in this volume are mostly from the cold temperate waters of the San Juan Archipelago near Puget Sound and the Strait of Georgia but the information and methods given will be useful in laboratories from Alaska to central California and applicable to some extent in other coastal or inland facilities An introductory chapter discusses basic procedures for collecting and maintaining mature specimens for initiating spawning and for culturing embryos and larvae in the laboratory Subsequent chapters summarize reproduction and development in thirty different invertebrate groups and provided recent references through which additional information can be traced cite monographs or keys needed to identify species and give methods useful for studying an array of selected species Available information on habitat diet reproductive mode egg size developmental pattern developmental times larval type and conditions for settlement and metamorphosis is reported for over 450 species

**Insect Hormones** Gerald Litwack, 2005-12-05 Insect biochemistry and molecular genetics have become enormously important sciences Molecular genetics of drosophila has paced mammalian genetics and has facilitated many advances in mammalian genetics Moreover many life threatening diseases for man are now carried chiefly by insects and our increasing knowledge of the basic science of insects may help to control these diseases There is no more important facet of insect science than insect hormones the agents that allow for communication between cells and tissues This volume updates important areas of this subject namely hormonal control of ecdysis ecdysone receptors in agriculture and medicine molecular structure of the receptor ligand binding site of ecdysone a molecular genetic approach to the biosynthesis of the molting hormone non steroidal ecdysone agonists molecular actions of juvenile hormone in drosophila and insect neuropeptide receptors

Ticks Alan S. Bowman, Patricia A. Nuttall, 2008-12-04 Widespread and increasing resistance to most available acaricides threatens both global livestock industries and public health This necessitates better understanding of ticks and the diseases they transmit in the development of new control strategies Ticks Biology Disease and Control is written by an international collection of experts and covers in depth information on aspects of the biology of the ticks themselves various veterinary and medical tick borne pathogens and aspects of traditional and potential new control methods A valuable resource for graduate students academic researchers and professionals the book covers the whole gamut of ticks and tick borne diseases from microsatellites to satellite imagery and from exploiting tick saliva for therapeutic drugs to developing drugs to control tick populations It encompasses the variety of interconnected fields impinging on the economically important and biologically fascinating phenomenon of ticks the diseases they transmit and methods of their control
