Reproductive Tissue Banking Scientific Principles:

Reproductive Tissue Banking, 1997 **Reproductive Tissue Banking** Armand M. Karow, John K. Critser, 1997-03-20 Reproductive technologies to assist in both human conception and animal breeding are increasingly in demand. These technologies along with the advent of tissue engineering have propelled the challenges of tissue collection, preservation, and banking to the research forefront. Using examples drawn from reproductive technologies, *Reproductive Tissue Banking* presents the scientific principles underlying tissue banking. These examples serve as models for the technology of banking other living tissues including blood, bone marrow, cornea, and skin. In discussing research emerging from their laboratories and those of others, the authors meld fundamentals of biology, chemistry, and physics with the latest discoveries in the field to give the reader profound insight into research directions and ethical considerations crucial to the advancement of tissue banking. With its emphasis on human applications and concerns, this book provides a valuable supplement to short courses on tissue preservation and tissue engineering. Researchers in reproductive medicine, animal and veterinary science, and cryobiology will find this book with its extensive bibliography a very handy reference. Written by leading international researchers, it provides insightful discussions on reproductive tissue banking. Presents comprehensive citations to relevant literature, both current and historic. Discusses in vitro preservation of spermatozoa, oocytes, embryos, and gonadal tissues of mammals. Contains coverage of ethical considerations from a discussion of the splitting of embryos to an exploration of the protection of biodiversity.

Reproductive Science and Integrated Conservation W. V. Holt, 2003 Reproduction is essential to the continuation and evolution of life on this planet and is therefore a centrally important process in the conservation of wildlife. However, reproductive mechanisms are well understood in only a handful of vertebrate species, mostly domestic livestock and laboratory animals. This means that attempts to develop and implement management policies for wildlife conservation and especially for endangered species that by definition are difficult to study are often based on poor data or no data at all. In *Reproductive Science and Integrated Conservation*, leading authorities provide glimpses of reproductive diversity in fishes, amphibians, reptiles, birds, and mammals. Conservation plans are founded on the assumption that reproduction will be successful, but what if it fails? This book reviews the many factors that influence reproduction, including genetics, behaviour, and nutrition, and experts assess the potential conservation relevance of the recent rapid advances in reproductive technology and medicine.

Reproductive Sciences in Animal Conservation William V. Holt, Janine L. Brown, Pierre Comizzoli, 2014-08-04 Reproductive biology is more than the development of techniques for helping with too little or too much breeding. While some of the relevant techniques are useful for individual species, technical developments have to be backed up by thorough biological understanding of the background behind the problems. This book is therefore threefold: 1) it provides a snapshot of the state of the art in terms of species-specific reproductive technologies, whether for individual animals or whole taxonomic groups; 2) it sets the reproductive problems in context and emphasizes the links

between animal based problems and the wider world e.g reproductive fitness and 3 it looks forward and presents realistic assessments of how effective some of the more recently developed techniques in reproductive technology might be at combating extinctions This is a wide ranging book that will be relevant to anyone involved in reproductive biology or in species conservation and provides provide them some useful perspectives about the real utility of current and emerging technologies It has contributions from experts in reproduction and related fields
