

Reptiles

Reptiles are one group (or Class) of animals. They share some important traits.

- 1) Most reptiles lay eggs (*oviparous*), though some can give birth to live young.
- 2) Their eggs are laid on land in loose soil or sand.
- 3) Their eggs have a leathery shell to protect them from drying out.
- 4) Reptiles are covered with tough, dry skin and protective scales or plates.
- 5) Reptiles are cold-blooded. This means that their body temperature is regulated by the air temperature. If the air is not warm enough, they seek out direct sunlight. They spend the winter months (in colder climates) in a kind of hibernation called *torpor*, buried in mud or leaf litter. In very hot climates, they may also hibernate when it's too hot. This is called *estivation*.
- 5) Unlike mammals, reptile teeth are usually the same shape and size throughout their mouth.
- 6) Unlike mammals, reptiles can take care of themselves very soon after hatching. Some species of reptiles, like the American alligator will watch over newly hatched young for a time.
- 7) Some reptiles have a venomous bite.
- 8) The study of reptiles is called *herpetology*.
- 9) Reptiles are broken down into 4 groups (Orders) living today.
 - Crocodylia (crocodiles, caimans, alligators, gharials)
 - Testudines (turtles, terrapins, sliders, tortoises)
 - Squamata is broken down into 2 suborders: Lacertilia or Sauria (lizards) and Serpentes (snakes)
 - Sphenodontia (tuataras)

Vertebrate Endocrinology David O. Norris,2006-11-27 One of the only books to discuss all vertebrates the fourth edition of Vertebrate Endocrinology has been completely reorganized and updated to explore the intricate mechanisms that control human physiology and behavior as well as that of other vertebrate animals Perfect for students in endocrinology zoology biology and physiology it allows readers to gain both an understanding of the intricate relationships among all of the body systems and their regulation by hormones and other bioregulators but also a sense of their

development through evolutionary time as well as the roles of hormones at different stages of an animal's life cycle. Chapters have been reorganized to more closely follow traditional classroom presentation and extensive suggested readings are included at the end of each chapter allowing the reader to obtain further information as well as connect concepts to the literature on which the book is based. For the first time this edition features four color illustrations. Provides a complete overview of the endocrine system of vertebrates by first emphasizing the mammalian system as the basis of most terminology and understanding of endocrine mechanisms and then applies that to non-mammals. Introduces the reader to suitable concepts and explanation of jargon so that the reader will be able to delve directly into the primary literature on any endocrine related topic with a background that will aid in their interpretation of new information. Revised and updated chapter on The Molecular Bases for Chemical Regulation that now includes more evolutionary data. Includes information on endocrine disrupting chemicals and their implications on the health of wildlife and humans.
