 Geographic information systems GIS the Global Positioning System GPS remote sensing and other information technologies have all changed the nature of work in the mapping sciences and in the professions industries and institutions that depend on them for basic research and education
 Today geographic information systems have become central to the ways thousands of government agencies private companies and not for profit organizations do business
 However the supply of GIS GIScience professionals has not kept pace with the demand generated by growing needs for more and improved geographic information systems and for more robust geographic data
 Beyond Mapping assesses the state of mapping sciences at the beginning of the twenty first century and identifies the critical national needs for GIS GIScience professionals
 It examines the forces that drive and accompany the need for GIS GIScience professionals including technological change demand for geographic information and changes in organizations
 It assesses education and research needs including essential training and education new curriculum challenges and responses quality assurance in education and training and organizational challenges
 Some of the report s recommendations include more collaboration among academic disciplines private companies and government agencies the implementation of GIS GIScience at all levels of education and the development of a coherent comprehensive research agenda for the mapping sciences
