Research and Development Management: From the Soviet Union to Russia Christoph M. Schneider, 2013-11-11 In the past intensive interest in Soviet research and development has been sporadic both in the West and in the USSR The end of the 1980s coincided with the demise of the Soviet model of economic development As a result a surge of attention has been given to t e factors driving the motor of Soviet growth and development as well as R D The opening first of the Soviet and subsequently of the Russian economy finally exposed it to global stan to scientific dards The long period of international isolation with respect and technological exchanges made it difficult for scholars and policy makers at home and abroad to measure the status of Soviet advances Consequently some overrated the levels while others underestimated them Now it comes to light that although the Soviets put the first satellite in space Sputnik and developed their own hydrogen bomb these were more the exceptions of innovation from research results rather than the rule Therefore as the management of the entire economy increasingly malfunctioned so did the management of R D in contributing to economic growth and development There is no denying the incredible investment of the former Soviet state in domestic science and research The R D community was one of the largest if not the largest in the world during the second half of the twentieth century Now Russia has inherited not only this enormous resource but also the inadequate organization management and structure *Innovation and Industrial Structure* Boris Maurer, 2012-12-06 The common topic of this collection of studies is the interaction between innova tive activity of firms and industrial structure I call this interaction technological competition Firms invest into R D in order to open up new or enlarge existing profit opportunities for the future A successful R D project leads to an innovation An innovation introduced into the market changes the competitive structure of the industry At the same time the structure of the industry shapes the incentives to invest into R D What matters for these incentives is not so much the existing structure but the expected dynamic evolution of that industry which is again dependent on the innovative choice of firms Amongst other things the dynamic of industry evolution is therefore rooted in the dynamics of ongoing innovative activity Of course this is not always the whole sto ry There are more or less exogenous factors like knowledge spillovers from other sectors of the economy technological breakthroughs in basic research that directly influence the state of competition in an industry by providing additional profit op portunities etc The same is true for exogenous changes in upstream markets or demand conditions My main interest here is not primarily to understand these exogenous forces but to develop a theory of how the process of firms innovative activity is shaped by competition and in turn shapes future competition between firms in The American Bibliography of Slavic and East European Studies for 1994 Patt Leonard, Rebecca an industry Routh, 1997-05-31 This text provides a source of citations to North American scholarships relating specifically to the area of Eastern Europe and the former Soviet Union It indexes fields of scholarship such as the humanities arts technology and life **The Political Economy of Trade Integration** Oliver sciences and all kinds of scholarship such as PhDs

Fratzscher, 2012-12-06 This dissension looks at increasing trade il Uegrorion from three angles FirSl what are welfare implications of trade integrmion and trading blocks Second what mechanism can improve the sustoinability of trade integration Third whO relationship evolved between trade and foreign direct investment Chapter I starts by questioning Krugman's 1993 trading block mode which suggested that world trade is increasingly conducted between three trading blocks which produces a minimum in world welfare His symmetrical trading block model is extended into a two sector model where trade is not only beneficial through increased varieties in a Dixit Stiglitz framework but also through comparative advantage Results show that i regionalism and multilateral ism can be compatible and welfare enhancing ii sequential integration can monotonously increase world welfare iii more dissimilar countries have higher potential benefits from integration iv about one third of potential gains from free trade under average tariffs are already realized in a system of three trading blocks Chapter II studies the political sustainability of trade integration The previous trading block model is combined with a political pressure group model where domestic interest groups lobby their government to proceed with sequential trade integration Theory shows that trade integration is politically not sustainable viii Pre lct when consumers and producers interests are opposed unless a mechanism is designed which links sequential trade integration with factor reallocation and which worsens the best alternative to integration **Agricultural Technical Progress and the Development of a Dual Economy** Thorsten Wichmann, 2012-12-06 A two sector model of a developing country consisting of agriculture and industry is presented Growth and structural change are discussed in variants with exogenous as well as endogenous technical progress algebraically and by numerical simulations Consequences from taking into account peculiarities of food production and consumption are analyzed These include technology adoption in agriculture Engel's law and a relationship between the level of nutrition and productivity **Ethics and Economics** Giuseppe Gaburro, 2012-12-06 Ethics and Economics is divided in two parts In the first one Italian and French catholic thinkers are analysed by well known scholars with basic reference to the economic view of their work In the second part the economic environment is described and proposals based on the social catholic thought for the solution of the most diffused economic problems are given The book therefore furnishes an alternative approach to the orthodox economic analysis and for this reason it may be a useful tool for researchers who wish to compare their theoretical approach with a less conventional one and for scholars who want to examine closely alternative views to the traditional economic models and paradigm International Economic Growth Michael Carlberg, 2012-12-06 This book deals with international growth featuring the dynamics of foreign debt and domestic capital It proves useful to consider the Solow model the overlapping generations model and the infinite horizon model Phase diagrams serve to trace out the processes of adjustment induced by various shocks Take for instance an increase in the saving rate a rise in the rate of labour growth or a one time technical progress What will be the effects on the balance of payments the foreign position the stock of capital and consumption The first chapter is concerned with the small open

economy chapter II is on large countries In chapter III capital mobility is restricted in chapter IV labour mobility is introduced in chapter V wages are fixed and in chapter VI growth becomes endogenous **Current Issues in Monetary** Economics Helmut Wagner, 2012-12-06 Helmut Wagner University of Hagen Feithstr 140 D 58084 Hagen In the last few years decisive methodological and thematic focal points which are important for practical economic policy have been developed in the theory of monetary and exchange rate policy This book is concerned with these developments their assessment and the open guestions which have still not been solved It is divided into four parts The first part deals with central bank design the second with strategies of monetary policies and their implementation Part III is concerned with theoretical aspects of exchange rate policy and monetary union and part IV with selected issues of monetary and exchange rate policy in developing and transition countries In the following pages I will provide an 1 overview of the individual articles With the exception of the article by Nobel Laureate James Tobin the contributions contained in this book were all introduced and discussed at an academic symposium I organized in Castrop Rauxel on 8 and 9 September 1997 James Tobin agreed spontaneously to my suggestion that he should write a comprehensive article especially for this publication A short summary of the comments or supplementary papers and of the general discussions will be given in the last section of this book titled Conclusion and Supplements There I will also provide some supplements respecting the issues which were the subject of the The German and Dutch Economies Lei Delsen, Eelke de Jong, 2012-12-06 greatest amount of debate at the symposium Institutions have both positive and negative effects on economic performance The theoretical and empirical understanding of the roles played by institutions norms and culture in the functioning of markets still is limited. This book contributes to a better understanding of the role played by institutions in economic life and to more balanced and better founded policy decisions related to the re structuring of industrial economies in response to the structural changes internationalisation of the economies the advances in information and communication technology and the ageing of populations they all are confronted with **Border-Regional Economics** Rongxing Guo, 2013-06-29 This research work is to commemorate all Guos ancestor who guarded the border for his Majesty dutifully and who is the foremost supporter in my academic career For the past decades economists and geographers from both developed and developing countries have studied the economic issues either within individual countries regions or between countries regions Only a relatively small part of these efforts has been focused on the economic affairs of those countries regions peripheral areas and even less attention has been given to the structural analysis of economic mechanisms of the border regions with different political levels and compositions My interest in border regions more or less directly relates to some personal reasons of mine The Chinese family name Guo means a guard for an outer city wall herein it used to be a political and military border in ancient China e g the Chinese Great Wall It is more interesting that Guo is written with a different Chinese character from that used for the like sounding Guo country The Chinese writing of the latter is a square frame inside which lies a Chinese character Wang king in the centre and a point

in the comer It might be simply supposed that the point was used by the inventor to necessarily represent the border guard probably because of its vital importance to the country Political Economy of the Swiss National Bank Bruno Jeitziner, 2012-12-06 Political Economy of the Swiss National Bank examines whether there exists any systematic political influence on Swiss monetary policy A partial adjustment model is used to derive the reaction functions Models of political business cycles and the theory of legislative control are for the first time applied to the Swiss institutional setting The inflationary performance of the National Bank is not explained with the legal relationship between the executive branch of government and the central bank It is interpreted as the result of the structure of the executive commission government and the characteristics of the Swiss political market for monetary policy In empirical tests no indirect political influence defined as a systematic relationship between fiscal and monetary policy and no direct political influence from elections the executive Transformation of Social Security Katharina Müller, Andreas Ryll, Hans-Jürgen and the legislature can be detected Wagener, 2012-12-06 This collection of papers focuses on the recent pension reform experiences in Central Eastern Europe while starting from a broader theoretical and empirical context It provides evidence for the political feasibility of radical pension reform considered unlikely in the West The approach is both multi disciplinary and cross regional The book contains papers by economists political scientists and sociologists The authors come from Germany Poland Hungary the Czech Republic and the US The volume consists of four parts First general guestions of transformation and social security in post 1989 Central Eastern Europe are addressed followed by an introduction into issues and role models in the international pension reform debate Then three Central European country cases are presented analysing institutional legacies recent reform measures and relevant political actors A comparative section on Central Eastern European pension reforms concludes The Institutionalised Transformation of the East German Economy Sabine Spangenberg, 2012-12-06 It is this book perhaps worth stressing that economic problems arise always and only in consequence of change So long as things continue as before or at least as they were expected to there arise no new problems requiring a decision no need to form a plan Hayek 1945 p 523 This book is based on my research for the degree of Doctor of Philosophy which I received from Lancaster University England in the second half of 1997 It is an analysis of the structural transformation of the economic system in East Germany and the behavioural relations these changes imply The approach of institutionalised transformation not the least by the creation of the Treuhandanstalt is examined with a theory based framework which is derived from system theoretical evolutionary and constitutional ethical considerations as well as from the newly developed adjustment model which has been constructed as a dynamic transformation approach A relationship between norm changes the new institutional framework of the economic system and the compatibility of the latter with changes of the remaining partial societal systems is recognised Rigidity factors in the system's flexibility to react as well as the adjustment of economic behaviour to structural changes are analysed The marginal product of system change is defined section 2 8 2 **Economic Performance** Bernhard

Böhm, Lionello F. Punzo, 2013-06-29 The economic performance of Austria and Italy during the last two decades is analysed by economists from both countries Their contributions interpret observed historical facts starting from a macroeconomic level down to disaggregated structural issues The performance as well as prospects of economic policy concerning the monetary sector the balance of payments the industrial sectors and the labour markets are reviewed Specific problem areas are investigated and relationships to current economic theory are established Readers find sufficient material to form opinions about the difference in national approaches to assess economic problems and about the different ways of attacking Nonlinear Time Series Analysis with Applications to Foreign Exchange Rate Volatility Christian Hafner, 2013-11-27 The book deals with the econometric analysis of high frequency financial time series It emphasizes a new nonparametric approach to volatility models and provides theoretical and empirical comparisons with conventional ARCH models applied to foreign exchange rates Nonparametric models are discussed that cope with asymmetry and long memory of volatility as well as heterogeneity of higher conditional moments The Political Economy of Fiscal Decisions Jessica de Wolff, 2012-12-06 A ruling party decides each of two periods on the level of public goods which it finances by means of taxation and internal debt The debt has to be honoured by the government of the second period Between the two periods elections take place which may change the ruling party The book analyzes the fiscal decision of the first government which aims to maximize the long run utility of its representative voter Conditions under which the government uses debt strategically in order to stay in power are identified It is also shown how the fiscal decisions hinge on the populations CO2 Abatement and Economic Structural Change in the political structure and its beliefs about the future government European Internal Market Frank Hoster, Heinz Welsch, Christoph Böhringer, 2012-12-06 European environmental and energy policies are currently challenged by two mutually dependent issues CO2 abatement and the completion of the Internal Market for energy Both will lead to substantial structural changes in the energy supply industry and in the wider economy The purpose of this book is to analyze the interaction between CO2 abatement economic structural change and the completion of the European Internal Market This involves not only significant general equilibrium effects but also technological changes especially in the electricity supply sector The simulation results indicate that the effects of measures to reduce European CO2 emissions depend considerably on the structure of the electricity supply system Regional Growth and Regional Policy Within the Framework of European Integration Karin Peschel, 2012-12-06 This volume contains the contributions from eight renowned referents on the occasion of the 25th anniversary of the Institute for Regional Research at the University of Kiel The contributions characterize main fields of interest of the Institute's research

<u>Business Cycle Models with Indeterminacy</u> Mark Weder,2012-12-06 Three original models which explain business cycles as a result of self fulfilling expectations are presented The models are founded on the structure of dynamic general equilibrium theory Market power and increasing returns to scale are introduced which allow indeterminancy of the Rational

Expectations equilibria to be obtained Unlike the majority of existing literature on this subject the departures from perfect markets and constant returns presented in these models are very low and more importantly at a realistic level to achieve the respective results It is demonstrated in all of the presented models that stylized facts of the business cycle can be reproduced

Dynamics of Regional Integration Uwe Walz,2012-12-06 Deepening and enlarging regional integration blocs is high on the political agenda as can be seen most notably in the last decade of the European in tegration process The effects of this process have been studied extensively But until recently these studies have been limited to the theoretical anal ysis of static effects of regional integration The revival of growth theory has however in principle provided a set of models and tools which allow to investigate the dynamic effects of regional integration At the same time the new regional economics or economic geography literature allowing to focus on the special features of regional integration and integration blocs has emerged The aim of this study is to merge endogenous growth approaches with new regional economics models in order to investigate various aspects of the long run effects of regional integration in a dynamic general equilibrium framework It is needless to say that such an analysis can cover only selected issues and leaves others aside It is the purpose of the present study how ever to look at both types of regional integration the dynamic effects of a deepening of the integration process as well as of an enlargement of the integration bloc This is done on the basis of an investigation of empirical regularities of regional developments in an integration bloc mainly in the European Union
