Social Stratification in an Aging Society with Low Fertility Sawako Shirahase, 2022-08-31. This edited book empirically discusses stratification in contemporary Japanese society. It is unique for its examination of social inequality in relation to declining fertility and an aging population. Japan is the most aged society in the world according to the Statistics Bureau of Japan; people who are aged 65 and above comprised 29.1% of the country's total population in 2021. Meanwhile, the fertility rate has continuously declined since the mid 1970s. Japan experienced a dramatic change in its demographic structure in a short period of time. Such fast change could be a major factor that generated social stratification. In her industrialization, Japan was thought to share a pattern of social stratification similar to that of developed European and North American countries but with a low degree of socio-economic inequality and a high degree of homogeneity. There is no clear support for this description of Japan although the country does share a pattern and degree of social stratification similar to that observed in Europe and North America. The social stratification theory has been developed in close relationship to the labor market; however, it is necessary to further examine the social stratification of very aged societies in which a substantial number of the population, namely retired persons, no longer have any ties to the labor market. In this book, the contributors explore the pattern of social stratification at three life stages: young, middle-aged, and elderly. Included are discussions of various aspects of stratification such as education, work, wealth, marriage, family, gender, generation, and social attitudes.

Education, Inequality and Social Class Ron Thompson, 2019-02-25. *Education, Inequality and Social Class* provides a comprehensive discussion of the empirical evidence for persistent inequality in educational attainment. It explores the most important theoretical perspectives that have been developed to understand class-based inequality and frame further research. With clear explanations of essential concepts, this book draws on empirical data from the UK and other countries to illustrate the nature and scale of inequalities according to social background, discussing the interactions of class-based inequalities with those according to race and gender. The book relates aspects of inequality to the features of educational systems, showing how policy choices impact on the life chances of children from different class backgrounds. The relationship between education and social mobility is also explored using the concepts of social closure, positionality, and social congestion. The book also provides detailed discussions of the work of Pierre Bourdieu and Basil Bernstein, two important theorists whose contributions have generated thriving research traditions much used in contemporary educational research. *Education, Inequality and Social Class* will be essential reading for postgraduate and advanced undergraduate students engaged in the study of education, childhood studies, and sociology. It will also be of great interest to academics, researchers, and teachers in training.
