Research Made Easy In Complementary And Alternative Medicine:

Acupuncture Research Hugh MacPherson, Richard Hammerschlag, George Thomas Lewith, Rosa N. Schnyer, 2007-10-12
This is the first book to set out a full range of research strategies for evaluating the clinical practice of acupuncture. Leading acupuncturists and researchers with international reputations share their expertise. They illustrate their descriptions with practical examples of what has worked and what has not. It outlines many of the key challenges in the field. These challenges relate to the nature of acupuncture and the gap between current research evidence and the actual experiences of acupuncturists in the field. By focusing the chapters on key research questions rather than methods, the book has a user friendly feel. Each chapter is easily accessible with brief explanations of research designs as well as vignettes of relevant past research. The book is based on a deep understanding of acupuncture with its inherent complexity in practice, whether based on traditional principles or more modern concepts. By incorporating a more sophisticated understanding of the field, this book details a range of strategies aiming to develop the evidence base with the utmost rigour. It is the first book on acupuncture research to take this unique view, integrating the very best of evidence based medicine with a genuine sensitivity to the discipline of acupuncture from its traditional and holistic roots to its more modern interpretations. **Research Made Easy**

in Complementary and Alternative Medicine Mark Kane, 2004. Highly engaging and visually attractive, this clear and lively introduction to research is designed to help readers gain confidence and initiate small practice based research projects. Providing a foundation in understanding research, it includes valuable information on how to get started, how to formulate useful and answerable research questions, a range of methodologies set in terms of their usefulness and limitations, strategies for seeing a project through completion and writing up the results. Pitfalls and pointers are also highlighted along the way. Provides a realistic and clear introduction to understanding research. Features simple explanation of all key concepts. Offers clear guidance on how to formulate and initiate a project. Includes a summary of pros and cons of each research methodology. Provides examples relating to each method. Includes checklists, summary boxes, warnings, tips, and illustrations in abundance.

Reshaping Herbal Medicine Catherine O'Sullivan, 2005-06-27. This is the first definitive book to draw on unique unpublished professional expertise about the reshaping of herbal medicine in the UK. This book outlines the outcomes of recent examinations and poses challenging questions about the direction of future herbal medicine policy within the UK. Contributions from Senior Members of the European Herbal Practitioners Association. Well written and presented. Includes vital issues such as divergent herbal traditions in the UK, history of herbal medicine in Europe, Patient and Public safety, and Cultural issues faced integrating traditional systems of medicine within an allopathic medical model. **Applied**

Psychophysiological Research Richard A. Sherman, Ph.D., 2022-12-31. This is a manual on how to do applied psychophysiological research and why. It is timely and necessary. Timely because applied psychophysiology has come to the attention of providers and the public who would like to benefit from the applications. In medicine, many current publications

address translational research Applied psychophysiology is translational research in the area of psychophysiology It is necessary because the validity of many claims of benefits for technologies and procedures are limited to testimonials and poorly designed research It is necessary because there are few resources to specifically guide a researcher who undertakes applied psychophysiology The goals of applied psychophysiology such as producing a useful effect are much different than the goals of basic research which are focused on validating a theoretical model Different tools are required to attain those goals Dr Sherman is a seasoned psychophysiologicalist with extensive publications in basic and applied research He has been a leader in professional societies fostering applied psychophysiology and he has refined the teachability of this material through years of teaching students in a graduate program of applied psychophysiology It begins immediately with cardinal rules for establishing credibility when you are preparing a clinical presentation or attending to a clinical presentation The rest of the book details how to address those rules An introduction orients the reader to the purpose needed statistical software definitions of applied psychophysiology the rationale of the discipline and a discussion of the scientific method The content is then presented in five sections covering A The need to know what you are doing from inspiration through protocol development research ethics and protocol approval process B Basic study structures such as research designs appropriate for office or clinical environments C Establishing credibility of data and psychophysiological publications D Statistics for evaluating and interpreting psychophysiological data and E Synthesizing these elements so that write ups and presentations use appropriate research designs and statistics provide an adequate basis to secure any needed grants and provide credible evidence to the professional community Additional sections F through J provide helps in the form of a glossary sample protocols that exemplify good and bad models recommendations for further readings and references This book would work well for graduate students in applied psychophysiology as it takes one through a carefully laid out series of steps from the beginning of inspiration through completed investigation and publication It is an important resource for anyone reading or producing applied psychophysiology research because most training in research methods do not clearly address applied research
