Research Progress in Organic, Biological and Medicinal Chemistry Ulisse Gallo, Leonida Santamaria, 1972 **The Science of Photomedicine** J.D. Regan, 2012-12-06 Although the history of photomedicine dates back thousands of years with even preliterate cultures appreciating the healing properties of sunlight for many workers in the discipline photomedicine is associated with the observation about 100 years ago of Niels Finsen a Danish physician Finsen recognized that people with tuberculosis who lived in Norway and who had very little exposure to sunlight often developed facial lesions lupus vulgaris which would decrease and sometimes disappear during the summer months This very observant physician reasoned that artificial light ought to produce the same effect as sunlight and began utilizing the radiation from the newly available carbon arc At first he used a glass lens to concentrate the radiation but since this produced considerable burning he replaced this with a hollow glass lens filled with water However while this reduced the heat burns it did not actually duplicate the effect of direct sunlight Finally using a hollow lens filled with water but equipped with quartz windows Finsen was able to imitate even improve upon the effect of sunlight As a result lupus vulgaris was practically eliminated from the Scandinavian countries **Radiation Research** Oddvar F. Nygaard, Howard I. Adler, Warren K. Sinclair, 2013-10-22 Radiation Research Biomedical Chemical and Physical Perspectives documents the proceedings of the Fifth International Congress of Radiation Research held in Seattle Washington 14-20 July 1974 While the focus of the Congress was on fundamental research there were several well attended sessions on the practical aspects of radiation research as it relates to radiotherapy central station power generation by both nuclear fission and fusion and the environment This volume contains 126 papers organized into 31 parts Beginning with a keynote address and a lecture on the time scale in radiobiology the subsequent contributions cover a wide range of topics presented over several sessions Topics discussed during these sessions include energy needs nuclear power and the environment prospects for fusion power technological applications of radiation human radiobiology hazards of radiation exposure relative to other environmental agents the basic physics of the interactions of radiation with matter particle penetration phenomena and radiation effects in frozen media *On the interacting visual and non-visual effects* Lucia R. Ronchi, 2012 **The Science of Photobiology** K. C. Smith, 2013-11-11 Although there are several excellent books covering a few of the specialized areas of photobiology at the present time there is no book that covers all areas of the science of photobiology This book attempts to fill this void The science of photobiology is currently divided into 14 subspecialty areas by the American Society for Photobiology The first 14 chapters of this book deal with those subspecialty areas each written by a leader in the field Chapter 15 entitled New Topics in Photobiology highlights areas of research that may be designated subspecialties of photobiology in the future This book has been written as a textbook to introduce the science of photobiology to advanced undergraduate and graduate students The chapters are written to provide a broad overview of each topic They are designed to contain the amount of information that might be

presented in a one to two hour general lecture The references are not meant to be exhaustive but key references are included to give students an entry into the literature Frequently a more recent reference that reviews the literature will be cited rather than the first paper by the author making the original discovery Whenever practical a classroom demonstration or simple laboratory exercise has been provided to exemplify one or more major points in a chapter *Annual Review of Gerontology and Geriatrics, Volume 10, 1990* Vincent J. Cristofalo, PhD, 1990-11-15 This volume presents a clear concise overview of the current state of knowledge about the biology of aging serving as both an invaluable graduate level text and a key reference for practicing professionals Over a dozen distinguished contributors probe the latest developments in our knowledge of why people age and how the process works These authoritative chapters are not just written for biologists but for gerontologists in general Marks the tenth anniversary of the *Annual Review of Gerontology and Geriatrics* Research Progress in Organic-biological and Medicinal Chemistry, 1972 **DHEW Publication**, 1975 Free Radicals in Biology V2 William Pryor, 2012-12-02 *Free Radicals in Biology Volume II* is a nine chapter text that describes the complexities in the chemical and physical behavior of free radicals After briefly providing an overview of the biology of pyridinyl radicals this book goes on discussing the role of glutathione in the cell and the reactions of single oxygen and its role in photochemical smog and in cellular chemistry These topics are followed by a discussion on the production of free radicals from dry tissue The subsequent chapters describe some of the key reactions in photochemical smog including reaction studies by computer simulation as well as the specific reactive materials that are present in smog These chapters also look into the chemistry of nitrogen oxides and ozone which are some of the most important reactions in photochemical smog The concluding chapters explore the radiation damage to proteins and radiation protection and radical reactions produced by radiation in nucleic acids Chemists biologists and physicists will find this text invaluable *Index of NLM Serial Titles* National Library of Medicine (U.S.), 1979 A keyword listing of serial titles currently received by the National Library of Medicine

Psychopharmacology Abstracts, 1964 Current Catalog National Library of Medicine (U.S.), 1993-04 **Molecular Mechanisms for Repair of DNA** Philip Hanawalt, 2012-12-06 An age has passed in the 40 years since we first observed recovery from radiation damage in irradiated bacteria During the early 1930s we had been discussing the possibility of rapid changes after radiation exposure with Farrington Daniels Benjamin Duggar John Curtis and others at the University of Wisconsin After working with living cells we had concluded that organisms receiving massive insults must have a wide variety of repair mechanisms available for restoration of at least some of the essential properties of the cell The problem was how to find and identify these recovery phenomena At that time I was working on a problem considered to be of great importance the existence of the so called mitogenetic rays Several hundred articles and a score of books had already appeared dealing with mitogenetic rays a type of radiation that was thought to exist in the shorter ultraviolet region Our search for mitogenetic rays necessitated the design of experiments of greatest sensitivity for the detection of ultraviolet It

was vital that conditions be kept as constant as possible during exposure. All the work was done at icewater temperature 3-5 °C during and after exposure. We knew that light was an important factor for cell recovery so all our experiments were done in dim light with the plated out cells being covered with dark cloth. Our statements on the effect of visible light stimulated Kelner to search for photoreactivation as it was later called.

Handbook of Laboratory Health and Safety Measures S.B. Pal, 2013-03-14

During the past two decades many books, governmental reports and regulations on safety measures against chemicals, fire, microbiological and radioactive hazards in laboratories have been published from various countries. These topics have also been briefly discussed in books on laboratory planning and management. The application of various scientific instruments based on different ionizing and non ionizing radiations have brought new safety problems to the laboratory workers of today irrespective of their scientific disciplines be they medicine, natural or life sciences. However, no comprehensive laboratory handbook dealing with all these hazards, some of which are recently introduced, had so far been available in a single volume. Therefore it was thought worthwhile to publish this Handbook on safety and health measures for laboratories with contributions from several experts on these subjects. As this second edition of the Handbook like the first edition is a multi-author volume, some duplication in content among chapters is unavoidable in order to maintain the context of a chapter as well as make each chapter complete. An attempt has also been made to maintain the central theme which is how to work in a laboratory with maximum possible environmental safety.
