Research To Write Pb 1994:

New Directions for Research in L2 Writing S. Ransdell, M.-L. Barbier, 2012-12-06 GERT RIJLAARSDAM

University of Amsterdam Utrecht University the Netherlands Multilingualism is becoming the default in our global world. The present day global citizens use different languages in different situations. Apart from their mother tongue they learn languages that give them access to other regions, nations and worlds. In all countries of the European Union, for instance, at least one foreign language is mandatory in secondary schools. Most students are taught English as a foreign language, the lingua franca in Europe. In large parts of the USA, students move from Spanish to English schooling. In parts of Canada, bilingual education is standard. In Catalonia, Spain, children learn Catalan and Spanish. In Hong Kong, English and Chinese. The smaller the world becomes, the more languages are used and learned. For writing process research, this development into multilingualism entails at least two challenges. First of all, studying the relation between writing in L1 and L2 provides an opportunity for collaborative studies in different language settings. Second, the issue of generalization of findings comes to the fore. It becomes evident now that we have unjustly neglected this issue in writing process research. We forgot to ask whether it is feasible to talk about writing processes in general without referring to the language of the written texts and without taking into account the educational and linguistic culture in which these texts originate.

Qualitative Methods in Military Studies Helena Carreiras, Celso Castro, 2013. This book examines the methodology of qualitative research in military studies. Since the end of the Cold War, the number of studies on military and society has grown substantially in substance, size and impact. However, only a tiny part of this bibliography deals in depth with the research methods used, especially in relation to qualitative methods. The data that form the basis of the researchers' analyses are often presented as if they were immediately available rather than as a product of interaction between the researcher and those who participated in the research. Comprising essays by international scholars, the volume discusses the methodological questions raised by the use of qualitative research methodology in military settings. On the one hand, it focuses on the specificity of the military as a social context for research; the authors single out and discuss the particular field effects produced by institutional arrangements, norms and practices of the military. On the other, the authors proceed in an empirical manner: all methodological questions are addressed with regard to concrete situations of field research. This book will be of much interest to students of military studies, research methods, sociology, anthropology, war and conflict studies, and security studies in general.
