This volume contains most of the papers presented at the workshop on research directions in high level parallel programming languages held at Mont Saint Michel France in June 1991 The motivation for organizing this workshop came from the emergence of a new class of formalisms for describing parallel computations in the last few years Linda Unity Gamma and the Cham are the most significant representatives of this new class Formalisms of this family promote simple but powerful language features for describing data and programs These proposals appeared in different contexts and were applied in different domains and the goal of the workshop was to review the status of this new field and compare experiences The workshop was organized into four main sessions Unity Linda Gamma and Parallel Program Design The corresponding parts of the volume are introduced respectively by J Misra D Gelernter D Le Metayer and J P Banatre

Research Directions in Parallel Functional Programming Kevin Hammond, Greg Michaelson, 2012-12-06 Programming is hard Building a large program is like constructing a steam locomotive through a hole the size of a postage stamp An artefact that is the fruit of hundreds of person years is only ever seen by anyone through a loo line window In some ways it is astonishing that such large systems work at all But parallel programming is much much harder There are so many more things to go wrong Debugging is a nightmare A bug that shows up on one run may never happen when you are looking for it but unfailingly returns as soon as your attention moves elsewhere A large fraction of the program s code can be made up of marshalling and coordination algorithms The core application can easily be obscured by a maze of plumbing Functional programming is a radical elegant high level attack on the programming problem Radical because it dramatically eschews side effects elegant because of its close connection with mathematics high level because you can say a lot in one line But functional programming is definitely not yet mainstream That s the trouble with radical approaches it s hard for them to break through and become mainstream But that doesn t make functional programming any less fun and it has turned out to be a wonderful laboratory for rich type systems automatic garbage collection object models and other stuff that has made the jump into the mainstream

Foundations of Parallel Programming D. B. Skillicorn, 1994-12 The major reason for the lack of use of parallel computing is the mismatch between the complexity and variety of parallel hardware and the software development tools to program it The cost of the developing software needs to be amortised over decades but the platforms on which it executes change every few years requiring complete rewrites The evident cost effectiveness of parallel computation has not been realized because of this mismatch This book presents an integrated approach to parallel software development that addresses software issues and performance issues together It presents a methodology for software construction that

produces software that is architecture independent and intellectually abstract The software can execute efficiently on a range of existing and potential hardware configurations The approach is based on the construction of categorical data types a generalisation of abstract data types and of objects Categorical data types abstract both from the representation of a data type and also from the detailed control flow necessary to perform operations on it They thus impose a strong separation between the semantics on which programs can depend and the implementation which is therefore free to hide the parallel machine properties that are used , *High-Level Parallel Programming Models and Supportive Environments* Frank Mueller,2003-05-15 On the 23rd of April 2001 the 6th Workshop on High Level Parallel Programming Models and Supportive Environments LCTES 98 was held in San Francisco HIPShas been held over the past six years in conjunction with IPDPS the International Parallel and Distributed Processing Symposium The HIPSworshop focuses on high level programming of networks of workstations computing clusters and of massively parallel machines Its goal is to bring together researchers working in the areas of applications language design compilers system architecture and programming tools to discuss new developments in programming such systems In recent years several standards have emerged with an increasing demand of support for parallel and distributed processing On one end message passing frameworks such as PVM MPI and VIA provide support for basic communication On the other hand distributed object standards such as CORBA and DCOM provide support for handling remote objects in a client server fashion but also ensure certain guarantees for the quality of services The key issues for the success of programming parallel and distributed environments are high level programming concepts and efficiency In addition other quality categories have to be taken into account such as scalability security bandwidth guarantees and fault tolerance just to name a few Today's challenge is to provide high level programming concepts without sacrificing efficiency This is only possible by carefully designing for those concepts and by providing supportive programming environments that facilitate program development and tuning **Parallel Computing** Christian Bischof,2008 ParCo2007 marks a quarter of a century of the international conferences on parallel computing that started in Berlin in 1983 The aim of the conference is to give an overview of the developments applications and future trends in high performance computing for various platforms

A Formal Approach to Hardware Design Jørgen Staunstrup,2012-12-06 A Formal Approach to Hardware Design discusses designing computations to be realised by application specific hardware It introduces a formal design approach based on a high level design language called Synchronized Transitions The models created using Synchronized Transitions enable the designer to perform different kinds of analysis and verification based on descriptions in a single language It is for example possible to use exactly the same design description both for mechanically supported verification and synthesis Synchronized Transitions is supported by a collection of public domain CAD tools These tools can be used with the book in presenting a course on the subject A Formal Approach to Hardware Design illustrates the benefits to be gained from adopting such techniques but it does so without assuming prior knowledge of formal design methods The book is thus not

only an excellent reference it is also suitable for use by students and practitioners Architectural Design of Multi-Agent Systems: Technologies and Techniques Lin, Hong, 2007-05-31 This book is a compilation of advanced research results in architecture and modeling issues of multi agent systems It serves as a reference for research on system models architectural design languages methods and reasoning module interface design and design issues Provided by publisher *High Performance Computing - HiPC 2000* Mateo Valero, Viktor K. Prasanna, Sriram Vajapeyam, 2003-06-29 This book constitutes the refereed proceedings of the 7th International Conference on High Performance Computing HiPC 2000 held in Bangalore India in December 2000 The 46 revised papers presented together with five invited contributions were carefully reviewed and selected from a total of 127 submissions The papers are organized in topical sections on system software algorithms high performance middleware applications cluster computing architecture applied parallel processing networks wireless and mobile communication systems and large scale data mining ECOOP '96 - Object-Oriented Programming Pierre Cointe, 1996-06-26 This book constitutes the refereed proceedings of the 10th European Conference on Object Oriented Programming ECOOP 96 held in Linz Austria in July 1996 The 21 full papers included in revised version were selected from a total of 173 submissions based on technical quality and originality criteria The papers reflect the most advanced issues in the field of object oriented programming and cover a wide range of current topics including applications programming languages implementation specification distribution databases and design **Implementation and Application of Functional Languages** Viktória Zsóka, Andrew Butterfield, 2007-08-14 This volume constitutes the post proceedings of the 18th International Workshop on Implementation and Applications of Functional Languages Fifteen full papers are presented Each one was submitted to two rounds of reviews to ensure accuracy thoroughness and readability The papers address all current theoretical and methodological issues in functional and function based languages **Program Development by Refinement** Emil Sekerinski, Kaisa Sere, 2012-12-06 The Idea of Program Refinement Programs are complex They are typically so complex that they go beyond the full comprehension even of the programmer or team who designed them with all the consequences this has How can we cope with such complexity in a satisfactory way An approach advocated for a long time is to separate a concise specification of a program the what from a possibly involved implementation the how Once a specification is obtained from the set of requirements on the program there can still be a large gap to an efficient implementation The development from specification to implementation can then proceed by a succession of layers such that each layer is a refinement of the previous one Design decisions can be introduced in refinement steps one at a time By this the refinement steps can be kept small and manageable Still the set of all requirements can be far too large to be taken completely into account in the initial specification Even if they could they might obscure issues more than clarify them For example An information system for stored goods needs to produce an error message on illegal input Yet the exact wording and even the language of those messages is irrelevant for an understanding of the essence of the system A banking

application interacts with customers with a graphical interface Yet the specification of the graphical layout is secondary compared to the specification of the possible transactions *Objects, Components, Architectures, Services, and Applications for a Networked World* Mehmet Aksit,Mira Mezini,Rainer Unland,2003-07-01 This book constitutes the thoroughly refereed post proceedings of the international conference NetObjectDays 2002 held in Erfurt Germany in October 2002 The 26 revised full papers presented were carefully selected during two rounds of reviewing and revision The papers are organized in topical sections on embedded and distributed systems components and MDA Java technology Web services aspect oriented software design agents and mobility software product lines synchronization testing refactoring and CASE tools
