**The Temporal Mechanics of the Fourth Gospel** Douglas Charles

Estes,2008-03-31 Spiritual but broken theological but flawed these are the words critics use to describe the Gospel of John Compared to the Synoptics John's version of the life of Jesus seems scrambled especially in the area of time and chronology But what if John's textual and temporal flaws have more to do with our implicit assumptions about time than a text that is truly flawed This book responds to that question by reinventing narrative temporality in light of modern physics and applying this alternative temporal lens to the Fourth Gospel From the singularity in the epic prologue to the narrative warping of event like objects this work explodes the elemental temporalities simmering below the surface of a spiritual yet superior Gospel text

mars 2013 une équipe européenne d'astrophysiciens sous la direction de l'Agence spatiale européenne rendait publiques des images issues d'une extraordinaire précision du rayonnement fossile de l'Univers, ses tout d'abord. Des clichés pris par le satellite européen Planck lancé en 2009, d'une résolution dix fois supérieure à celle du dernier disponible, pris par la NASA en 2003 qui rapportent quelque 13,8 milliards d'années en arrière, 380 000 ans seulement après sa naissance, le Big Bang. Parmi eux, une carte complète de ce fond diffus cosmologique qui dévoile le cosmos en formation, soit une moisson de renseignements majeurs quant à sa genèse et composition, au carrefour de la cosmologie et de la physique des particules, entre validation voire révision de hypothèses proposées par les théoriciens et observation d'anomalies inattendues à expliquer. De quoi notamment saisir pour la première fois, quoi a ressemblé le Big Bang, tape-œuvre de nos origines, et alimenter la recherche relative à ce qui l'a précédé dans le domaine des thèses de doctorat respectives des auteurs. En talentueux passeurs, Igor et Grichka BOGDANOV, pionniers de la vulgarisation scientifique tant didactique que visuelle, proposent l'intention du plus large public curieux ou passionné, le premier titre consacré aux résultats de la mission Planck. Les frères Bogdanov y relatent avec verve la manière dont la collaboration Planck s'inscrit dans la continuité historique, en forme de saga pleine de rebondissements, d'une discipline jalonnée de grands noms pour beaucoup moins connus que Edwin Hubble, Stephen Hawking et Georges Smoot, en passant par Alexandre Friedmann, Georges Gamow, Edward Teller, Henrietta Leavitt, Robert Wilson et Arno Penzias, entre autres, dont ils rappellent les démarches et contributions, et comment contextualisées. Igor et Grichka exposent par ailleurs les enjeux questionnements et défis associés aux premières données publiées et reviennent plus spécifiquement sur les questions de la forme de l'Univers, du sens de sa création et bien sûr de l'avant-Big Bang. Esprits indépendants, les Bogdanov se risquent, ce faisant, à ouvrir le débat, à interpréter, à formuler de nouvelles hypothèses et à esquisser des pistes de réflexion dans le sillage de quelques astrophysiciens de renom, dont des collaborateurs de la mission Planck, dont ils relaient les déclarations et commentaires héroïques. Un rendez-vous ne pas manquer dans l'enfance de l'Univers, en compagnie d'un duo de spécialistes pour mieux comprendre et suivre les grisantes découvertes en cours.
