Environmental Cardiology Aruni Bhatnagar, 2010 Although it is widely recognized that environmental factors such as smoking diet exercise and socioeconomic status affect the risk of cardiovascular disease recent work showing the effects of other environmental factors provides a more complete assessment of the situation This view has emerged from three developments Firstly there has been a sudden explosion in the prevalence of diabetes and obesity which indicates a strong environmental component Secondly there is an accumulation of evidence suggesting that most cases of these diseases could be prevented by healthy lifestyle choices Finally studies have shown that exposure to environmental pollutants has a significant effect on heart disease risk This book is the first to provide a comprehensive account of the effects of pollutants on heart disease and to integrate this area of research within the overall theme of environmental cardiology The introductory chapter outlines the effects of different aspects of the environment on heart disease and provides a context for the discussion that follows Subsequent chapters give an overview of the effects of particulate matter and discuss the epidemiological studies supporting the link The book then goes on to cover the effects of pollution on different aspects of cardiovascular disease hypertension stroke heart failure ischemic heart disease and atherogenesis Because of a close association between diabetes and heart disease a discussion of the effects of particulate matter on diabetes is also included Later chapters discuss the effects of individual pollutants such as vehicular emissions metals and aldehydes A review on manufactured nanoparticles is incorporated because these particles represent an important new threat to cardiovascular health The understanding that emerges from this monograph suggests that we must be more alert to the effects of the environment and develop strategies that target not only the diseased individual but also the unhealthy disease causing environment It is essential reading for cardiologists epidemiologists urban planners and pollution control specialists **Chronic Diseases** Jean Kaplan

Thrombolytic Therapy for Acute Stroke Patrick D. Lyden,2007-11-08 It often takes time for a new therapeutic modality to mature into an accepted treatment option After initial approval new drugs devices and procedures all go through this process until they become vetted by the scientific community as well as the medical community at large Thrombolysis for treatment of stroke is no exception Thrombolytic Therapy for Acute Stroke Second Edition comes four years after the first edition and provides a very comprehensive updated perspective on the use of intravenous rt TPA in acute stroke The authors provide longer term follow up on the pivotal clinical trials that led to Food and Drug Administration approval data concerning phase 4 trials in larger numbers of patients and most importantly the community experience that has accumulated since its release They add to this the latest promising information concerning intra arterial thrombolysis which is still under investigation and more speculative sections concerning possible new avenues of clinical research such as combining intravenous thr bolysis

with neuroprotective therapies or intra arterial thrombolysis A wealth of factual information is supplemented by chapters containing sage opinion from Drs Lyden and Caplan concerning the logistical economic and procedural issues that have been generated since the advent of this technology Importantly diagnosis does not take a back seat to therapeutics as illustrated by sections devoted to evaluation of the stroke patient very useful illustrative cases and clinical comments and chapters on the latest in imaging as applied to this field
