**Long Eighteenth Century** Ute Lotz-Heumann, 2021-07-25 Shifting the focus from the medical use of spas to their cultural and social functions this study shows that eighteenth and early nineteenth century German spas served a vital role as spaces where new ways of perceiving the natural environment and conceptualizing society were disseminated Although spas continued to be places of health and healing their function and perception in central Europe changed fundamentally around the middle of the eighteenth century This transformation of the role of the spa occurred in two ways First the spa popularized a new perception of the landscape with a preference for mountains and the seacoast forming the basis for the cultural assumptions underlying modern tourism Second contemporaries perceived spas as meeting places comparable to institutions of Enlightenment sociability like coffeehouses salons and Masonic lodges Spas were conceived as spaces where the nobility and the bourgeoisie could interact on an equal footing thereby overcoming the constraints of early modern social boundaries These changes were negotiated through both personal interactions at spas and an increasingly sophisticated published spa discourse The late eighteenth and early nineteenth century German spa thus helped to bring about social and cultural modernity      **Early Nutrition and Long-Term Health** Jose M Saavedra, Anne M. Dattilo, 2016-11-29 The nutrition of an individual during gestation and the first two years of life the first 1 000 days sets the stage for lifelong health Nutrition quality and quantity in this period can influence the risk of developing diseases that constitute today s epidemics Early life nutrition can program the body s tissues organ structure and function and metabolic and immunologic responses These factors impact growth development and cognition and the risk of cardiovascular diseases allergies and obesity The first part of Early Nutrition and Long Term Health examines the mechanisms by which early nutrition affects the risk of developing these conditions The second part of this book reviews specific non communicable diseases NCDs associated with early nutrition The third part discusses the effects of nutritional programming from fetal life to toddlerhood Prevention of over or undernutrition in early life rather than dietary behavioral or therapeutic interventions in later life is likely to have a greater return on society s investment in coping with the modern epidemic of NCDs Examines the relation between early life nutrition and long term health Covers the mechanistic aspects of nutritional programming and its impact on risk of chronic non communicable diseases Reviews associations between infant and child diet and its effect on growth development
