Mengel, 2013-11-11 As we move into the 21st century it is becoming increasingly difficult to offer appropriate introductory clinical experiences for medical students Many schools offer clinical experiences in the first year of medical school when the learner has little background in the traditions and origins of the doctor patient interaction Others begin this process in the second year after a professional language base has been established but concise educational materials are scarce that integrate the meaning of the privileged clinical encounter with the process and content of interviewing and examining patients In the tertiary hospitals where most medical schools are based the educators must provide an orienta tion to the clinical encounter an intensely personal experience in the midst of glittering technological marvels that easily distract both the novice physician and the wizened teacher Understanding the context and historical basis for the privilege of interviewing and examining another person about intimate matters relating to health and disease is essential to this process Considering these factors this textbook is written to assist medical educators and medical students involved in early clinical training As the demand for high tech medicine has accelerated so has the public concern over the loss of high touch or compassionate humane interactions with physicians Physicians are perceived as more concerned with readouts from machines and fiberoptic views of the patient than with understanding and car ing about the people we have labeled as patients Black Families In Crisis Alice F. Coner-Edwards, Jeanne Spurlock, 2014-06-17 First published in 1989 The idea for this volume grew out of discussions held by a group of Black psychiatrists based in Washington D C and the responses of a number of colleagues who attended a symposium Black Families in Crisis at Howard University Medical Center in November 1985
