Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2017-12-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the fourth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process The Behaviour and Design of Steel Structures to EC3 is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries **The Architect's Studio Companion** Edward Allen, Joseph Iano, 2017-01-20 The time saving resource every architect needs The Architect's Studio Companion is a robust user friendly resource that keeps important information at your fingertips throughout the design process It includes guidelines for the design of structure environmental systems parking accessibility and more This new sixth edition has been fully updated with the latest model building codes for the U S and Canada extensive new information on heating and cooling systems for buildings and new structural systems all in a form that facilitates rapid preliminary design More than just a reference this book is a true companion that no practicing architect or student should be without This book provides quick access to guidelines for systems that affect the form and spatial organization of buildings and allows this information to be incorporated into the earliest stages of building design With it you can Select configure and size structural systems Plan for building heating and cooling Incorporate passive systems and daylighting into your design Design for

parking and meet code related life safety and accessibility requirements Relying on straightforward diagrams and clear written explanations the designer can lay out the fundamental systems of a building in a matter of minutes without getting hung up on complicated technical concepts By introducing building systems into the early stages of design the need for later revisions or redesign is reduced and projects stay on time and on budget The Architect s Studio Companion is the time saving tool that helps you bring it all together from the beginning
