The SAGES Manual Carol E. H. Scott-Conner, Springer, 1999 The practice patterns of general surgery have changed significantly in the last decade as a result of the increasing use of flexible endoscopy both diagnostic the introduction of laparoscopic endoscopy as a and therapeutic and also therapeutic technique These changes have occurred over a short period of time and continue rapidly with the increasing use of advanced laparoscopic procedures Residents who have completed their training and are entering the practice of general surgery must be very familiar with and must be well educated in these two areas Flexible endoscopy and laparoscopy will be a significant part of their practice and with time will become more important and more widely used Residency programs are struggling to develop educational programs that will adequately prepare residents for the future of endoscopy and laparoscopy This is difficult in some programs because of the lack of clinical endoscopic material the lack of understanding of the importance of endoscopic techniques in their medical communities and a lack of interest and training of their staff There is also a lack of good textbooks or educational tools aimed directly at residents to help these programs There is a definitive need for a comprehensive textbook directed at the education of residents

**The SAGES Manual of Perioperative Care in Minimally Invasive Surgery** Richard L. Whelan, James W. Fleshman, Dennis L. Fowler, 2006-01-16 The second SAGES Society of American Gastrointestinal Endoscopic Surgeons manual was intended to be a companion piece for the successful first SAGES manual edited by Carol Scott Connor that was published more than 4 years ago Originally the goal was to concentrate on tersely covered or often ignored aspects of the preoperative preparation of the patient and the operating room as well as the postoperative care of patients undergoing minimally invasive operations It was also our intention to include a section for each procedure where several different port placement schemes would be presented and briefly discussed Unique to this manual the impact of the patient's body habitus short or long narrow or wide on port placement is also taken into account for many of the procedures Also unique are chapters devoted to hypothermia port wound closure and the management of subcutaneous emphysema and abdominal wall hemorrhage caused by trocars Naturally the surgeon tends to focus on the technical aspects of the procedure such as the operative tasks to be carried out the order of operation and the position of the surgeon and assistant However it is critical that the surgeon be aware that the CO pneumoperitoneum far more so than laparotomy results in multiple physiologic alterations that if not compensated for by the anesthesiologist and surgeon may endanger the patient or prevent the laparoscopic completion of the procedure
