Experimental Electrical Engineering and Manual for Electrical Testing; for Engineers and for Students in Engineering Laboratories Vladimir Karapetoff,1907 *Text Data Management and Analysis* ChengXiang Zhai,Sean Massung,2016-06-30 Recent years have seen a dramatic growth of natural language text data including web pages news articles scientific literature emails enterprise documents and social media such as blog articles forum posts product reviews and tweets This has led to an increasing demand for powerful software tools to help people analyze and manage vast amounts of text data effectively and efficiently Unlike data generated by a computer system or sensors text data are usually generated directly by humans and are accompanied by semantically rich content As such text data are especially valuable for discovering knowledge about human opinions and preferences in addition to many other kinds of knowledge that we encode in text In contrast to structured data which conform to well defined schemas thus are relatively easy for computers to handle text has less explicit structure requiring computer processing toward understanding of the content encoded in text The current technology of natural language processing has not yet reached a point to enable a computer to precisely understand natural language text but a wide range of statistical and heuristic approaches to analysis and management of text data have been developed over the past few decades They are usually very robust and can be applied to analyze and manage text data in any natural language and about any topic This book provides a systematic introduction to all these approaches with an emphasis on covering the most useful knowledge and skills required to build a variety of practically useful text information systems The focus is on text mining applications that can help users analyze patterns in text data to extract and reveal useful

knowledge Information retrieval systems including search engines and recommender systems are also covered as supporting technology for text mining applications The book covers the major concepts techniques and ideas in text data mining and information retrieval from a practical viewpoint and includes many hands on exercises designed with a companion software toolkit i e MeTA to help readers learn how to apply techniques of text mining and information retrieval to real world text data and how to experiment with and improve some of the algorithms for interesting application tasks The book can be used as a textbook for a computer science undergraduate course or a reference book for practitioners working on relevant problems in analyzing and managing text data
