Manufacturing Systems Design and Analysis B. Wu, 2012-12-06 A technological book is written and published for one of two reasons it either renders some other book in the same field obsolete or breaks new ground in the sense that a gap is filled The present book aims to do the latter On my return from industry to an academic career I started writing this book because I had seen that a gap existed Although a great deal of information appeared in the published literature about various technical aspects of advanced manufacturing technology AMT surprisingly little had been written about the systems context within which the sophisticated hardware and software of AMT are utilized to increase efficiency Therefore I have attempted in this book to show how structured approaches in the design and evaluation of modern manufacturing plant may be adopted with the objective of improving the performance of the factory as a whole I hope this book will be a contribution to the newly recognized multidisciplinary engineering function known as manufacturing systems engineering The text has been designed specifically to demonstrate the systems aspects of modern manufacturing operations including systems concepts of manufacturing operation manufacturing systems modelling and evaluation and the structured design of manufacturing systems One of the major difficulties associated with writing a text of this nature stems from the diversity of the topics involved I have attempted to solve this problem by adopting an overall framework into which the relevant topics are fitted

**Performance Analysis of Manufacturing Systems** Tayfur Altioğlu, 2012-12-06 Manufacturing industries are devoted to producing high quality products in the most economical and timely manner Quality economics and time not only indicate the customer satisfaction level but also measure the manufacturing performance of a company Today's manufacturing environments are becoming more and more complex flexible and information intensive Companies invest into the information technologies such as computers communication networks sensors actuators and other equipment that give them an abundance of information about their materials and resources In the face of global competition a manufacturing company's survival is becoming more dependent on how best this influx of information is utilized Consequently there evolves a great need for sophisticated tools of performance analysis that use this information to help decision makers in choosing the right course of action These tools will have the capability of data analysis modeling computer simulation and optimization for use in designing products and processes International competition also has had its impact on manufacturing education and the government's support of it in the US We see more courses offered in this area in industrial engineering and manufacturing systems engineering departments operations research programs and business schools In fact we see an increasing number of manufacturing systems engineering departments and manufacturing research centers in universities not only in the US but also in Europe Japan and many developing countries
